A Study of Student Motivations to Study Abroad in Non-traditional Locations Aug 09 2021 This study examines why students at Claremont McKenna College (CMC) chose their location of study abroad. In order to identify these factors, a survey was administered to students who studied abroad since the year 2000. The survey was sent to 798 students and resulted in nearly a twenty percent (157 students) response rate. The

questionnaire addressed the following themes: Academic, personal, social, and career motivations in choosing destination for study abroad. A number of questions were also asked to ascertain where students receive information regarding study abroad and what influence these factors have on choice. Based on the findings, a number of recommendations have been made for better understanding of student motivations. These recommendations include: using fellow students more proactively to provide information on study abroad, urging faculty members and other administrators to be proactive in promoting study abroad, and encouraging career service centers to play a greater role in helping students choose their destination. Recommendations for further research are included as well.

Critical Approaches to the Study of Higher Education Jul 08 2021 An essential guide to incorporating critical

research into higher education scholarship. Winner of the Outstanding Publication Award of the Post-secondary Education Division of the American Educational Research Association Critical theory has much to teach us about higher education. By linking critical models, methods, and research tools with an advocacy-driven vision of the central challenges facing postsecondary researchers and staff, *Critical Approaches to the Study of Higher Education* makes a significant—and long overdue—contribution to the development of the field. The contributors argue that, far from being overly abstract, critical tools and methods are central to contemporary scholarship and can have practical policy implications when brought to the study of higher education. They argue that critical research design and critical theories help scholars see beyond the normative models and frameworks that have long limited our understanding of students, faculty, institutions, the organization and governance of higher education, and the policies that shape the postsecondary arena. A rigorous and invaluable guide for researchers seeking innovative approaches to higher education and the morass of traditionally functionalist, rational, and neoliberal thinking that mars the field, this book is also essential for instructors who wish to incorporate the lessons of critical scholarship into their course development, curriculum, and pedagogy.
