"Neoconservatism: Why We Need It mounts a vigorous defense of the most controversial political philosophy of our age. In this book, the British commentator Douglas Murray takes a fresh look at the movement that replaced Great Society liberalism, helped Ronald Reagan bring down the Wall, and provided the intellectual rationale for the Bush administration's War on Terror." "Neoconservatism: Why We Need It is essential reading for

anyone who wants to understand the core ideals that have guided American foreign policy at the dawn of the twenty-first century."--

The Characteristics of Mechanical Engineering Systems focuses on the characteristics that must be considered when designing a mechanical engineering system. Mechanical systems are presented on the basis of component input-output relationships, paying particular attention to lumped-parameter problems and the interrelationships between lumped components or "black-boxes" in an engineering system. Electric motors and generators are treated in an elementary manner, and the principles involved are explained as far as possible from physical and qualitative reasoning. This book is comprised of five chapters and begins with an introduction to the engineering system and how it works, citing a number of examples such as internal combustion engines, electric generators, and power converters in series. The discussion then turns to power conversion, with emphasis on general forms of converter output characteristic, demand characteristic, and efficiency characteristic. Power transmission is also considered, along with dynamic performance and energy storage. The final chapter examines the linear dynamics of mechanical systems and covers topics such as small excursion dynamics, integral control, and sinusoidal disturbance. Examples of control systems are given. This monograph should be of interest to mechanical engineers. This volume includes selected and reviewed papers from the 4th International Congress of Automotive and Transport Engineering, held in Cluj, Romania, in September 2018. Authors are experts from research, industry and universities coming from 14 countries worldwide. The papers are covering the latest developments in automotive vehicles and environment, advanced transport systems and road traffic, heavy and special vehicles, new materials, manufacturing technologies and logistics, accident research and analysis and innovative solutions for automotive vehicles. The conference is organized by SIAR (Society of Automotive Engineers from Romania) in cooperation with FISITA. While more than 600,000 hysterectomies are performed each year in the United States, 90 percent of them are unwarranted. This vital health guide offers women the information they need to empower themselves in making critical health decisions. For example, surgery can often do more harm than good and may pose needless risks, except in situations involving a life-threatening illness such as cancer. Surgeons, however, often rely on hysterectomies as a panacea for everything from premenstrual syndrome to uterine fibroids. An important way to bridge the communication gap between patient and physician is to ask the specific questions in this book. Included is information about various gynecological conditions—such as endometriosis, uterine prolapse,

ovarian cysts, and precancerous conditions—and suggestions for alternative treatments.
