Improving the Safety and Efficiency of Emergency Services: Emerging Tools and Technologies for First Responders Nov 19 2019 During emergency situations, society relies upon the efficient response time and effective services of emergency facilities that include fire departments, law enforcement, search and rescue, and emergency medical services (EMS). As such, it is imperative that emergency crews are outfitted with technologies that can cut response time and can also predict where such events may occur and prevent them from happening. The safety of first responders is also of paramount concern. New tools can be implemented to map areas of vulnerability for emergency responders, and new strategies can be devised in their training to ensure that they are conditioned to respond efficiently to an emergency and also conscious of best safety protocols. Improving the Safety and Efficiency of Emergency Services: Emerging Tools and Technologies for First Responders addresses the latest tools that can support first responders in their ultimate goal: delivering their patients to safety. It also explores how new techniques and devices can support first responders in their work by addressing their safety, alerting them to accidents in real time, connecting them with medical experts to improve the chances of survival of critical patients, predicting criminal and terrorist activity, locating missing persons, and allocating resources. Highlighting a range of topics such as crisis management, medical/fire emergency warning systems, and predictive policing technologies, this publication is an ideal reference source for law enforcement, emergency professionals, medical professionals, EMTs, fire departments, government officials, policymakers, IT consultants, technology developers, academicians, researchers, and students.

In the Line of Fire Oct 31 2020 In the wake of disaster emergency responders are first on the scene and last to leave. They put concern for the lives of others over concern for their own lives, and work tirelessly to recover the bodies of the missing. Their heroic actions save lives, provide comfort to and care for the wounded and inspire onlookers, but at what cost to themselves? We now know that rescue workers who are exposed to mutilated bodies, mass destruction, multiple casualties, and life-threatening situations may become the hidden victims of disaster. The traumatic consequences of exposure can profoundly impact emergency responders, radiate to their families, and permeate the emergency organization. This much-needed new book, based on the authors' original research and clinical experience, describes the consequences of trauma exposure on police officers, fire fighters, and paramedics. Weaving data collected in

large-scale quantitative studies with the personal stories of responders shared in qualitative interviews, this much-needed account explores the personal, organizational, and societal factors that can ameliorate or exacerbate traumatic response. Stress theory, organizational theory, crisis theory, and trauma theory provide a framework for understanding trauma responses and guiding intervention strategies. Using an ecological perspective, the authors explore interventions spanning prevention, disaster response, and follow-up, on individual, family, group, organizational, and community levels. They provide specific suggestions for planning intervention programs, developing trauma response teams, training emergency service responders and mental health professionals, and evaluating the effectiveness of services provided. Disaster, whether large-scale or small, underscores our ongoing vulnerability and the crucial need for response plans that address the health and well being of those who confront disaster on a daily basis. In the Line of Fire speaks directly to these emergency response workers as well as to the mental health professionals who provide them with services, the administrators who support their efforts, and the family members who wonder if their loved one will return home safely from work tonight.

This book is designed to improve the quality of your EMS delivery.

Critical Decision Making Jun 19 2022 By nature, competent decisions by emergency responders are challenging because incidents are fluid and dynamic. In Critical Decision Making, Chief Michael Barakey gives emergency first responders the tools to succeed on every incident where they make critical decisions and mitigate incidents daily under stress. This book reviews cases to identify

common incident elements that hinder quality decision making, and it introduces point-to-point leadership, a systematic approach to making critical decisions from the time responders are alerted to an incident to its resolution. Understanding how to make critical decisions in this dynamic process is what makes great leaders. WHAT OTHERS ARE SAYING: "For years, fire rescue training programs have only addressed the concept of critical decision making in a limited way. Chief Barakey tackles this mission critical process in a straight forward, direct, comprehensive and understandable way...A tip of the helmet to Chief Barakey and Fire Engineering Books for delivering such a practical and impactful book." —Dennis L. Rubin, Fire Rescue author "I have had the pleasure of working both professionally and personally with Chief Barakey for more than 25 years. Mike helped me better understand the daily operations of managing a hazardous materials response team. He has crafted a great resource for first responders interested in developing or improving their ability to make critical decisions during the most stressful situations. This step by step process is required reading for anyone that has the task of making critical decisions either on the strategic, tactical, or task level." —Murrey Loflin, Battalion Chief (Retired), Virginia Beach Fire Department and federal fatality investigator "Chief Barakey shares how to blend education, experience and opportunity and develop skills on the smaller incidents where most of us get a second chance to command and learn. He has always been a proponent of sending the elevator back down to show others the best way to move up ... Now is the time for your second chance at incident command and emergency service leadership. Read this book and use your second chance while you have it." —Stephen Miles, retired Battalion Chief of Safety from the Virginia Beach Fire Department and federal fatality investigator
