An introduction to archaeology for amateurs covers archaeological techniques, excavation methods, and tools, and lists important archaeological sites and agencies throughout the world This book explores an alternate history of the power and agency of 30 Hungarian queens over 400

years by a rigorous examination of the material culture connected with their lives. By researching the objects, images, and spaces, it demonstrates how these women expressed and displayed their power. Queens used material culture and space not only to demonstrate their own power to a wide, international audience, but also to consolidate their own position when it was weakened by external circumstances. Both the public and private image of the queen factors significantly in understanding in her own role at the strongly centralized Hungarian court, and, moreover, how her position and person strengthened and complemented that of the king. Archaeological interpretation is an imaginative act. Stratigraphy and artefacts do not tell us what the past was like; that is the task of the archaeologist. The diverse group of contributors to this volume address the relationship between archaeology and imagination through the medium of historical fiction and fictive techniques, both as consumers

and as producers. The fictionalisation of archaeological research is often used to disseminate the results of scholarly or commercial archaeology projects for wider public outreach. Here, instead, the authors focus on the question of what benefits fiction and fictive techniques, as inspiration and method, can bring to the practice of archaeology itself. The contributors, a mix of archaeologists, novelists and other artists, advance a variety of theoretical arguments and examples to advance the case for the value of a reflexive engagement between archaeology and fiction. Themes include the similarities and differences in the motives and methods of archaeologists and novelists, translation, empathy, and the need to humanise the past and diversify archaeological narratives. The authors are sensitive to the epistemological and ethical issues surrounding the influence of fiction on researchers and the incorporation of fictive techniques in their work. Sometimes dismissed as distracting just-so

stories, or even as dangerously relativistic narratives, the use of fictive techniques has a long history in archaeological research and examples from the scholarly literature on many varied periods and regions are considered. The volume sets out to bring together examples of these disparate applications and to focus attention on the need for explicit recognition of the problems and possibilities of such approaches, and on the value of further research about them. Presenting results from Tanamu 1, the first site to be published in detail in the Caution Bay Studies in Archaeology series. Yielding well-provenanced and finely dated assemblages of ceramics, faunal remains, and stone and shell artefacts, these remarkable sites extend the range of the Lapita cultural complex to the south coast of Papua New Guinea. A chronological summary of major stages in Southeastern United States' development, this unique textbook overviews the region's archaeology from 20,000 years ago to World

War I. Early chapters review the history and development of archaeology as a discipline. The following chapters, organized in chronological order, highlight the archaeological characteristics of each featured period. The book's final chapters discuss new directions in Southeastern archaeology, including trends in teaching, research, the business of archaeology, and the public's growing interest. This versatile text perfectly suits undergraduates or anyone requiring a hands-on guide for self-exploration of the fascinating region. This is the first-of-its kind book to summarize Southeastern archaeology. It includes both prehistoric and historic archaeology. Its easy-to-read format is filled with valuable research information. Each chapter is chronologically organized and fully referenced. It has broad audience appeal. Based on studies at Bethsaida, Capernaum, Nazareth, Jerusalem, and elsewhere, this volume shows how recent archaeological studies clarify the world, life, and thought of Jesus of Nazareth. It contains the

revised and edited lectures that leading archaeologists and biblical scholars presented at a gathering in Jerusalem to celebrate the new millennium. Many contributors came directly from their excavations in places like Bethsaida, Capernaum, Nazareth, and Jerusalem to share their discoveries and insights, focusing on the question In what ways do new archaeological discoveries clarify the world, life, and thought of Jesus from Nazareth? Readers of Jesus and Archaeology will gain many new insights into the life and times of this fascinating Galilean Jew. The Ramsey House was built in 1797 for Col. Francis Alexander Ramsey, a prominent early settler of East Tennessee who, along with his two sons J. G. M. Ramsey and William B. A. Ramsey, shaped the physical and cultural landscape of what would become Knox county and Knoxville, Tennessee. The one-hundred-acre homestead, referred to by Colonel Ramsey as Swan Pond, contained the Ramsey home as well as other outbuildings and slave quarters. In

1952, the Association for the Preservation of Tennessee purchased the tract of land, and the Ramsey House is now listed on the National Register of Historic Places. Charles H. Faulkner began archaeological investigations at the Ramsey House in 1985 and concluded his work with his retirement from the University of Tennessee's anthropology department in 2005. During his tenure with the Ramsey House Archaeological Project, Faulkner and his team of scholars and students unearthed the prehistory of Native American occupation at Swan Pond, several outbuilding and early home foundation features yielding evidence of extensive early renovations to the Ramsey House and surrounding Swan Pond, and a multitude of ceramics and other artifacts left behind by the Ramsey family and other tenants ranging in dates from the late 1700s to the 1950s. Faulkner's research presented in *The Ramseys at Swan Pond* reveals not only the material culture and family lifeways of early wealth in

East Tennessee, but chronicles the occupation of a homestead that would become pivotal to the development of early Knoxville and Knox County and offers insights into the responsibilities Ramsey and his family undertook in order to tame an early American frontier. Faulkner provides the reader a complete overview of the excavations, and emphasizes the importance of historic research within the discipline of archaeology in his introduction. The Ramseys at Swan Pond will be of interest to anyone studying historic archeology, the early American frontier, and Tennessee history. Charles H. Faulkner is Professor Emeritus in the Department of Anthropology and Distinguished Professor of Humanities at the University of Tennessee. He is the author/editor of *The Prehistoric Native American Art of Mud Glyph Cave*, *The Old Stone Fort: Exploring an Archaeological Mystery*, *Rock Art of the Eastern Woodlands*, and numerous other essays. A veteran archaeologist sheds light on the biblical text by examining archaeological

discoveries. Contemporary Archaeology and the City foregrounds the archaeological study of post-industrial and other urban transformations through a diverse, international collection of case studies. Over the past decade contemporary archaeology has emerged as a dynamic force for dissecting and contextualizing the material complexities of present-day societies. Contemporary archaeology challenges conventional anthropological and archaeological conceptions of the past by pushing temporal boundaries closer to, if not into, the present. The volume is organized around three themes that highlight the multifaceted character of urban transitions in present-day cities - creativity, ruination, and political action. The case studies offer comparative perspectives on transformative global urban processes in local contexts through research conducted in the struggling, post-industrial cities of Detroit, Belfast, Indianapolis, Berlin, Liverpool, Belém, and post-Apartheid Cape Town, as well as the

thriving urban centres of Melbourne, New York City, London, Chicago, and Istanbul. Together, the volume contributions demonstrate how the contemporary city is an urban palimpsest comprised by archaeological assemblages - of the built environment, the surface, and buried sub-surface - that are traces of the various pasts entangled with one another in the present. This volume aims to position the city as one of the most important and dynamic arenas for archaeological studies of the contemporary by presenting a range of theoretically-engaged case studies that highlight some of the major issues that the study of contemporary cities pose for archaeologists. "Hell, I don't break the soil periodically to 'reaffirm my status'. I do it because archeology is still the most fun you can have with your pants on." - Kent V. Flannery. In her quest to make archaeology available to the public, Kris Hirst has put together a collection of over 400 pithy quotes from archaeologists and others about the science of archaeology or the

mysteries of history and the past. The quotations are categorized into subject areas with full citations and context and include sections on fieldwork, the uses of archaeology, ethics, ownership of the past, lessons of archaeology, and many other topics. Hirst's book is a great resource for students, academics and others browsing for suitable quotes for use in classroom presentations, student papers, and research articles. The image of Old West saloons as sites of violence and raucous entertainment has been perpetuated by film and legend, but the true story of such establishments is far more complex. In *Boomtown Saloons*, archaeologist Kelly J. Dixon recounts the excavation of four historic saloon sites in Nevada's Virginia City, one of the West's most important boomtowns, and shows how the physical traces of this handful of disparate drinking places offer a new perspective on authentic life in the mining West. During the second half of the nineteenth century, the Comstock Lode's mineral wealth

attracted people from all over the world. At its peak, Virginia City had a cosmopolitan population of over 20,000 people. Like people everywhere, they sought to pass their leisure time in congenial company, often in one or another of the four saloons studied here. Dixon's account of the role these four establishments played in the social and economic life of Virginia City offers keen insight into the businesses and people who made up the backdrop of a mining boomtown. The saloons in this study were quieter than legend would have us believe; they served relatively distinct groups and offered their customers a place of refuge, solidarity, and social contact with peers in a city where few people had longtime ties or initially any close contacts. *Boomtown Saloons* also offers an equally vivid portrait of the modern historical archaeologist who combines time-honored digging, reconstruction, and analysis methods with such cutting-edge technology as DNA analysis of saliva traces on a 150-year-old

pipestem and chemical analysis of the residue in discarded condiment bottles. The book is illustrated with historical photographs and maps, as well as photographs of artifacts uncovered during the excavations of the four sites. Dixon's sparkling text and thoughtful interpretation of evidence reveal an unknown aspect of daily life in one of the West's most storied boomtowns and demonstrate that, contrary to legend, the traditional western saloon served an vital and complex social role in its community. Available in hardcover and paperback. Carved from cliffs and canyons, buried in desert rock and sand are pieces of the ancient past that beckon thousands of visitors every year to the American Southwest. Whether Montezuma Castle or a chunk of pottery, these traces of prehistory also bring archaeologists from all over the world, and their work gives us fresh insight and information on an almost day-to-day basis. Who hasn't dreamed of boarding a time machine for a trip into the past? This book

invites us to step into a Hohokam village with its sounds of barking dogs, children's laughter, and the ever-present grinding of mano on metate to produce the daily bread. Here, too, readers will marvel at the skills of Clovis elephant hunters and touch the lives of other ancestral people known as Mogollon, Anasazi, Sinagua, and Salado. Descriptions of long-ago people are balanced with tales about the archaeologists who have devoted their lives to learning more about "those who came before." Trekking through the desert with the famed Emil Haury, readers will stumble upon Ventana Cave, his "answer to a prayer." With amateur archaeologist Richard Wetherill, they will sense the peril of crossing the flooded San Juan River on the way to Chaco Canyon. Others profiled in the book are A. V. Kidder, Andrew Ellicott Douglass, Julian Hayden, Harold S. Gladwin, and many more names synonymous with the continuing saga of southwestern archaeology. This book is an open invitation to general

readers to join in solving the great archaeological puzzles of this part of the world. Moreover, it is the only up-to-date summary of a field advancing so rapidly that much of the material is new even to professional archaeologists. Lively and fast paced, the book will appeal to anyone who finds magic in a broken bowl or pueblo wall touched by human hands hundreds of years ago. For all readers, these pages offer a sense of adventure, that "you are there" stir of excitement that comes only with making new discoveries about the distant past. In this sweeping and lavishly illustrated history, Katharina Galor and Hanswulf Bloedhorn survey nearly four thousand years of human settlement and building activity in Jerusalem, from prehistoric times through the Ottoman period. The study is structured chronologically, exploring the city's material culture, including fortifications and water systems as well as key sacred, civic, and domestic architecture. Distinctive finds such as

paintings, mosaics, pottery, and coins highlight each period. Their book provides a unique perspective on the emergence and development of Judaism, Christianity, and Islam, and the relationship among the three religions and their cultures into the modern period. This book reviews the latest research in this field, and describes the sometimes controversial interpretations that have led to rapid advances in our understanding of life and death in the distant past." "Past, present and future "The archaeological materials recovered from the Anyang excavations ... in the period between 1928 and 1937...have laid a new foundation for the study of ancient China (Li, C. 1977: ix)." When inscribed oracle bones and enormous material remains were found through scientific excavation in Anyang in 1928, the historicity of the Shang dynasty was confirmed beyond dispute for the first time (Li, C. 1977: ix-xi). This excavation thus marked the beginning of a modern Chinese archaeology endowed with

great potential to reveal much of China's ancient history.. Half a century later, Chinese archaeology had made many unprecedented discoveries which surprised the world, leading Glyn Daniel to believe that "a new awareness of the importance of China will be a key development in archaeology in the decades ahead (Daniel 1981: 211). This enthusiasm was soon shared by the Chinese archaeologists when Su Bingqi announced that "the Golden Age of Chinese archaeology is arriving (Su, B. 1994: 139--140)". In recent decades, archaeology has continuously prospered, becoming one of the most rapidly developing fields in social science in China"--Provided by publisher. A Companion to the Archaeology of Religion in the Ancient World presents a comprehensive overview of a wide range of topics relating to the practices, expressions, and interactions of religion in antiquity, primarily in the Greco-Roman world. • Features readings that focus on religious experience and expression in the ancient world

rather than solely on religious belief • Places a strong emphasis on domestic and individual religious practice • Represents the first time that the concept of "lived religion" is applied to the ancient history of religion and archaeology of religion • Includes cutting-edge data taken from top contemporary researchers and theorists in the field • Examines a large variety of themes and religious traditions across a wide geographical area and chronological span • Written to appeal equally to archaeologists and historians of religion New perspectives on transitions in humanhistory Thisbook is about transitional periods of cultural and environmental change as seenthrough the lenses of archaeology and ethnography. Incorporating data fromacross six continents and tracing the human experience from the LatePleistocene to the present, this book offers a global comparative perspectiveon transitional states. Questionsof causality are considered, as are hypotheses about the processes of

cultural change. Archaeology on the Threshold focuses on major transitions such as the shift from foraging to agriculture, the adoption of new technologies, the emergence of large-scale societies, the transition from egalitarian to inegalitarian leadership, and changes that occur in socioeconomic and ideological systems as a result of climate change and disease. Theoretical approaches range from processual to postprocessual, humanistic, and interpretive. Methodologies include ethnoarchaeology, the use of ethnographic analogy, cross-cultural comparisons and large-scale data approaches, oral history, the historical record, participant observation, and focus group discussions. Challenging archaeologists to query long-held assumptions and theoretical positions, this volume aims to refocus inquiry into change-causing and larger evolutionary processes to problematize notions of evolutionary, irrevocable change. These case studies examine and shed light on assumptions regarding

the linearity and oscillations of adaptations, with intriguing implications for archaeological inferences. Through time people have lived with darkness. Archaeology shows us that over the whole human journey people have sought out dark places, for burials, for votive deposition and sometimes for retreat or religious ritual away from the wider community. Thirteen papers explore Palaeolithic use of deep caves in Europe and the orientation of mortuary monuments in the Neolithic and Bronze Age. It examines how the senses are affected in caves and monuments that were used for ritual activities, from Bronze Age miners in Wales working in dangerous subterranean settings, to initiands in Italian caves, to a modern caver's experience of spending time in the one of the world's deepest caves in Russia. We see how darkness was and is viewed at northern latitudes where parts of the year are spent in eternal night, and in Easter Island where darkness provided communal refuge from the pervasive sun. We know that

spending extended periods in darkness and silence can affect one physically, emotionally and spiritually. How did interactions between people and darkness affect individuals in the past and how were they regarded by their communities? And how did this interaction transform places in the landscape? As the ever-increasing electrification of the planet steadily minimizes the amount of darkness in our lives, curiously, darkness is coming more into focus. This first collection of papers on the subject begins a conversation about the role of darkness in human experience through time. In this expansive yet concise survey, Christopher Fennell discusses archaeological research from sites across the United States that once manufactured, harvested, or processed commodities. Through studies of craft enterprise and the industrial revolution, this book uncovers key insights into American history from the seventeenth through the nineteenth centuries. Exploring evidence from textile mills,

glassworks, cutlery manufacturers, and tanneries, Fennell describes the complicated transition from skilled manual work to mechanized production methods, and he offers examples of how artisanal skill remained important in many factory contexts. Fennell also traces the distribution and transportation of goods along canals and railroads. He delves into sites of extraction, such as lumber mills, copper mines, and coal fields, and reviews diverse methods for smelting and shaping iron. The book features an in-depth case study of Edgefield, South Carolina, a town that pioneered the production of alkaline-glazed stoneware pottery. Fennell outlines shifts within the field of industrial archaeology over the past century that have culminated in the recognition that these locations of remarkable energy, tumult, and creativity represent the lives and ingenuity of many people. In addition, he points to ways the field can help inform sustainable strategies for industrial enterprises in the present day. A

volume in the series the American Experience in Archaeological Perspective, edited by Michael S. Nassaney and Krysta Ryzewski Adam King's Archaeology in South Carolina contains an overview of the fascinating archaeological research currently ongoing in the Palmetto state featuring essays by twenty scholars studying South Carolina's past through archaeological research. The scholarly contributions are enhanced by more than one hundred black and white and thirty-eight color images of some of the most important and interesting sites and artifacts found in the state. South Carolina has an extraordinarily rich history encompassing the first human habitation of North America to the lives of people at the dawn of the modern era. King begins the anthology with the basic hows and whys of archeology and introduces readers to the current issues influencing the field of research. The contributors are all recognized experts from universities, state agencies, and private consulting firms, reflecting the diversity

of people and institutions that engage in archaeology. The volume begins with investigations of some of the earliest Paleo-Indian and Native American cultures that thrived in South Carolina, including work at the Topper Site along the Savannah River. Other essays explore the creation of early communities at the Stallings Island site, the emergence of large and complex Native American polities before the coming of Europeans, the impact of the coming of European settlers on Native American groups along the Savannah River, and the archaeology of the Yemassee, a people whose history is tightly bound to the emerging European society. The focus then shifts to Euro-Americans with an examination of a long-term project seeking to understand George Galphin's trading post established on the Savannah River in the eighteenth century. A discussion of Middleburg Plantation, one of the oldest plantation houses in the South Carolina lowcountry, is followed by a fascinating glimpse

into how the city of Charleston and the lives of its inhabitants changed during the seventeenth and eighteenth centuries. Essays on underwater archaeological research cover several Civil War-era vessels located in Winyah Bay near Georgetown and Station Creek near Beaufort, as well as one of the most famous Civil War naval vessels—the H.L. Hunley. The volume concludes with the recollections of a life spent in the field by South Carolina’s preeminent historical archaeologist Stanley South, now retired from the South Carolina Institute of Archaeology and Anthropology at the University of South Carolina. *The Archaeology of Human Bones* provides an up to date account of the analysis of human skeletal remains from archaeological sites, introducing students to the anatomy of bones and teeth and the nature of the burial record. Drawing from studies around the world, this book illustrates how the scientific study of human remains can shed light upon important archaeological and historical questions. This

new edition reflects the latest developments in scientific techniques and their application to burial archaeology. Current scientific methods are explained, alongside a critical consideration of their strengths and weaknesses. The book has also been thoroughly revised to reflect changes in the ways in which scientific studies of human remains have influenced our understanding of the past, and has been updated to reflect developments in ethical debates that surround the treatment of human remains. There is now a separate chapter devoted to archaeological fieldwork on burial grounds, and the chapters on DNA and ethics have been completely rewritten. This edition of *The Archaeology of Human Bones* provides not only a more up to date but also a more comprehensive overview of this crucial area of archaeology. Written in a clear style with technical jargon kept to a minimum, it continues to be a key work for archaeology students. This volume addresses the creation, documentation, preservation, and study of the archaeology of

lunar, planetary, and interstellar exploration. It defines the attributes of common human technological expressions within national and, increasingly, private exploration efforts, and explore the archaeology of both fixed and mobile artifacts in the solar system and the wider galaxy. This book presents the research of the foremost scholars in the field of space archaeology and heritage, a recent discipline of the field of Space Archaeology and Heritage. It provides the emerging archaeological perspective on the history of the human exploration of space. Since humans have been creating a vast archaeological preserve in space and on other celestial bodies. This assemblage of heritage objects and sites attest to the human presence off the Earth and the study of these material remains are best investigated by archaeologists and historic preservationists. As space exploration has reached the half century mark, it is the appropriate time to reflect on the major events and technological development of

this particular unique 20th century arena of human history. The authors encapsulate various ways of looking at the archaeology of both fixed and mobile human artifacts in the solar system. As missions continue into space, and as private ventures gear up for public and tourist visits to space and to the Moon and even Mars, it is the appropriate time to address questions about the meaning and significance of this material culture. This volume examines the commensal politics of early states and empires and offers a comparative perspective on how food and feasting have figured in the political calculus of archaic states in both the Old and New Worlds. It provides a cross-cultural and comparative analysis for scholars and graduate students concerned with the archaeology of complex societies, the anthropology of food and feasting, ancient statecraft, archaeological approaches to micro-political processes, and the social interpretation of prehistoric pottery. The Archaeology of Refuge and Recourse explores

the dual practices of refuge and recourse among Indigenous peoples of California. From the eighteenth to the twentieth century, Indigenous Coast Miwok communities in California persisted throughout multiple waves of colonial intrusion. But to what ends? Applying theories of place and landscape, social memory, and mobility to the analysis of six archaeological sites, Tsim D. Schneider argues for a new direction in the archaeology of colonialism. This book offers insight about the critical and ongoing relationships Indigenous people maintained to their homelands despite colonization and systematic destruction of their cultural sites. Schneider is a citizen of the Federated Indians of Graton Rancheria, the sovereign and federally recognized tribe of Coast Miwok and Southern Pomo people whose ancestral homelands and homewaters are the central focus of *The Archaeology of Refuge and Recourse*. Viewing this colonial narrative from an Indigenous perspective, Schneider focuses on the nearly one

quarter of Coast Miwok people who survived the missions and created outlets within and beyond colonial settlements to resist and endure colonialism. Fleeing these colonial missions and other establishments and taking refuge around the San Francisco Bay Area, Coast Miwok people sought to protect their identities by remaining connected to culturally and historically significant places. Mobility and a sense of place further enabled Coast Miwok people to find recourse and make decisions about their future through selective participation in colonial projects. In this book, Tsim D. Schneider argues that these distancing and familiarizing efforts contribute to the resilience of Coast Miwok communities and a sense of relevance and belonging to stolen lands and waters. Facing death, violence, and the pervading uncertainty of change, Indigenous people of the Marin Peninsula balanced the pull and persistence of place against the unknown possibilities of a dynamic colonial landscape and the forward-

thinking required to survive. History, change, and the future can be read in the story of Coast Miwok people. Historical archaeologists are in a unique position to analyze both historical documents and archaeological data in order to generate hypotheses and draw conclusions. In this work, the data not only provided the history of the ship "Catharine" but also the economic, social and political environments in which the ship was built and employed. This work focuses not only on the shipwreck and the wrecking event, but on the history and archaeology of a single ship. With this expanded view, the research also delves into: *International shipbuilding; *The struggle for dominance in the ship trade in the 19th century. This book will be of interest to underwater, historical and cultural archaeologists, social historians, cultural heritage managers and archaeologists working in the southeastern United States. The Archaeology and Ethnography of Central Africa provides the first detailed description of the

prehistory of the Loango coast of west-central Africa over the course of more than 3,000 years. The archaeological data presented in this volume comes from a pivotal area through which, as linguistic and historical reconstructions have long indicated, Bantu-speaking peoples expanded before reaching eastern and southern Africa. Despite its historical importance, the prehistory of the Atlantic coastal regions of west-central Africa has until now remained almost unknown. James Denbow offers an imaginative approach to this subject, integrating the scientific side of fieldwork with the interplay of history, ethnography, politics, economics, and personalities. The resulting 'anthropology of archaeology' highlights the connections between past and present, change and modernity, in one of the most inaccessible and poorly known regions of west-central and southern Africa. "In this book, C. Riley Aug provides a trailblazing archaeological study of magical practice and its

relationship to gender in the Anglo-American culture of colonial New England"--

Archaeological discoveries can shed a flood of light on the biblical text. This richly illustrated resource, now available in paperback, offers illuminating archaeological information related to the Old Testament. In this readable and accessible volume, Alfred Hoerth surveys the entire Old Testament, pointing out the relevant archaeological material and explaining how it enriches biblical studies. In an attempt to bridge the Old and New Testament worlds, he devotes the final chapter to an examination of the intertestamental period. The text boasts over 250 illustrative items--charts, photographs, line drawings, and maps. Elam was an important state in southwestern Iran from the third millennium BC to the appearance of the Persian Empire and beyond. Less well-known than its neighbors in Mesopotamia, Anatolia, the Levant or Egypt, it was nonetheless a region of extraordinary cultural vitality. This book

examines the formation and transformation of Elam's many identities through both archaeological and written evidence, and brings to life one of the most important regions of Western Asia, re-evaluates its significance, and places it in the context of the most recent archaeological and historical scholarship. The new edition includes material from over 800 additional sources, reflecting the enormous amount of fieldwork and scholarship on Iran since 1999. Every chapter contains new insights and material that have been seamlessly integrated into the text in order to give the reader an up-to-date understanding of ancient Elam. Religion in ancient Greece had a strong public character and within this public religion, there were special cults - 'mysteries'. This welcome volume showcases new research on the archaeology, ritual and history of Greek mystery cults. How did ancient peoples experience, view, and portray the night? What was it like to live in the past when total nocturnal darkness was the

norm? Archaeology of the Night explores the archaeology, anthropology, mythology, iconography, and epigraphy of nocturnal practices and questions the dominant models of daily ancient life. A diverse team of experienced scholars uses a variety of methods and resources to reconstruct how ancient peoples navigated the night and what their associated daily—and nightly—practices were. This collection challenges modern ideas and misconceptions regarding the night and what darkness and night symbolized in the ancient world, and it highlights the inherent research bias in favor of “daytime” archaeology. Numerous case studies from around the world (including Oman, Mesoamerica, Scandinavia, Rome, Great Zimbabwe, Indus Valley, Peru, and Cahokia) illuminate subversive, social, ritual, domestic, and work activities, such as witchcraft, ceremonies, feasting, sleeping, nocturnal agriculture, and much more. Were there artifacts particularly associated with the night?

Authors investigate individuals and groups (both real and mythological) who share a special connection to nighttime life. Reconsidering the archaeological record, Archaeology of the Night views sites, artifacts, features, and cultures from a unique perspective. This book is relevant to anthropologists and archaeologists and also to scholars of human geography, history, astronomy, sensory studies, human biology, folklore, and mythology. Storey, Meghan Strong, Cynthia Van Gilder, Alexei Vranich, John C. Whittaker, Rita Wright Brings together archaeologists, art historians, sociologists, and classicists to explore the origins and development of unequal relationships in ancient

societies. The Archaeology of Inequality explores the different aspects of social boundaries and articulation by comparing several interdisciplinary approaches for the analysis of the archaeological data, as well as actual case studies from the Prehistory to the Classical world. The book explores slavery, gender, ethnicity and economy as intersecting areas of study within the larger framework of inequality and exemplifies to what degree archaeologists can identify and analyze different patterns of inequality. Orlando Cerasuolo is Adjunct Professor of Etruscan and Pre-Roman Archaeology at the Eastern University of Naples. Developed with three educational levels in mind, The Archaeology Book takes you on an exciting exploration of history and ancient cultures. You'll learn both the techniques of the archaeologist and the accounts of some of the richest discoveries of the Middle East that demonstrate the accuracy and historicity of the Bible. In The Archaeology Book you will unearth:

How archaeologists know what life was like in the past Why broken pottery can tell more than gold or treasure can Some of the difficulties in dating ancient artifacts How the brilliance of ancient cultures demonstrates God's creation History of ancient cultures, including the Hittites, Babylonians, and Egyptians The early development of the alphabet and its impact on discovery The numerous archaeological finds that confirm biblical history Why the Dead Sea scrolls are considered such a vital breakthrough Filled with vivid full-color photos, detailed drawings, and maps, you will have access to some of the greatest biblical mysteries ever uncovered. Free downloadable study guide at www.masterbooks.org Social Approaches to an Industrial Past addresses the social issues of

mining communities in research spanning a period of 4,500 years. The volume considers themes which are relatively new to archaeology: * the social context of production * gender * power and labour exploitation * imperialism and colonialism * production and technology. Archaeology is a jargon-free and accessible introduction to the field which details how archaeologists study the human past in all its fascinating diversity. Now in its thirteenth edition, this classic textbook has been updated to include the latest research and new findings in the field. Reflecting the global scope of the discipline, the book has a truly international coverage of important discoveries and sites from many corners of the globe. Individual chapters examine archaeology and its history, considering the role of the archaeologist and how they discover, investigate and classify sites and artifacts. This journey through archaeology also includes a discussion of important individuals and groups, and some of the ways in which

archaeologists attempt to explain major social and cultural changes in the remote past. Archaeology ends with an outline of the complex world of cultural resource management and gives invaluable advice on how to become an archaeologist. Richly illustrated throughout, this popular and engaging textbook on archaeological methods has introduced generations of students to the captivating world of archaeology. "This book exhorts the reader to embrace the materiality of archaeology by recognizing how every step in the discipline's scientific processes involves interaction with myriad physical artifacts, ranging from the camel-hair brush to profile drawings to virtual reality imaging. At the same time, the reader is taken on a phenomenological journey into various pasts, immersed in the lives of peoples from other times, compelled to engage their senses with the sights, smells, and noises of the publics and places whose remains they study. This is a refreshingly original and provocative

look at the meaning of the material culture that lies at the foundation of the archaeological discipline.”—Michael Brian Schiffer, author of *The Material Life of Human Beings* “This volume is a radical call to fundamentally rethink the ontology, profession, and practice of archaeology. The authors present a closely reasoned, epistemologically sound argument for why archaeology should be considered the discipline of things, rather than its more commonplace definition as the study of the human past through material traces. All scholars and students of archaeology will need to read and contemplate this thought-provoking book.”—Wendy Ashmore, Professor of Anthropology, UC Riverside "A broad, illuminating, and well-researched overview of theoretical problems pertaining to archaeology. The authors make a calm defense of the role of objects against tedious claims of 'fetishism.'"—Graham Harman, author of *The Quadruple Object* Agnieszka Helman-Ważny's
