*Intelligence, law and practice in the nations of the world with the most current references and resources. The eBook is organized around five main themes: 1. Money Laundering Risk and Compliance; 2. The Law of Anti-Money Laundering and Compliance; 3. Criminal and Civil Forfeiture; 4. Compliance and 5. International Cooperation. Each chapter is made up of five parts. Part I, "Introduction," begins with the analysis of money laundering risks and compliance with the recommendations of the Financial Action Task Force (FATF), and then concludes with the country's rating based on the International Narcotics Control Strategy Report (INCSR) of the U.S. State Department. Part II, "Anti-Money Laundering and Combating Terrorist Financing (AML/CTF)" and Part III, "Criminal and Civil Forfeiture," evaluate the judicial and legislative structures of the country. Given the increasing global dimension of AML/CTF activities, these sections give special attention to how a country has created statutes, decisions, policies and the judicial enforcement procedures needed to combat money laundering and terrorist financing. Part IV, "Compliance," examines the most critical processes for the prevention and detection of money laundering and terrorist financing. This section reflects on the practical elements that should be in place so that financial institutions can comply with AML/CTF requirements; these are categorized into the development and implementation of internal controls, policies and procedures. Part V, "International Cooperation," reviews the compilation of international laws and treaties between countries working together to combat money laundering and terrorist financing. As these unlawful activities can occur in any given country, it is important to identify the international participants who are cooperating to develop methods to obstruct these criminal activities. In communities across the nation, families feel the pinch of stagnant and*

*sometimes declining incomes. Many have not recovered from the Great Recession, when millions lost their homes and retirement savings. They are bombarded daily with vexing financial decisions: Which bills to pay? Where to cash checks? How to cover an emergency? How to improve a credit report? How to bank online? How to save for the future? Low- and moderate-income families have few places to turn for guidance on financial matters. Not many can afford to pay a financial advisor to help navigate an increasingly complex financial world. They do their best with advice from family and trusted individuals. Social workers, financial counselors, and human services professionals can help. As "first responders," they assist families and help in finding financial support from public and private sources. But these professionals are too often unprepared to address the full range of financial troubles of ordinary working families. Financial Capability and Asset Building in Vulnerable Households prepares social workers, financial counselors, and other human service professionals for financial practice with vulnerable families. Building on more than 20 years of research, the book sets the stage with key concepts, historical antecedents, and current financial challenges of families in America. It provides knowledge and tools to assist families in pressing financial circumstances, and offers a lifespan perspective of financial capability and environmental influences on financial behaviors and actions. Furthermore, the text details practice principles and skills for direct interventions, as well as for designing financial services and policy innovations. It is an essential resource for preparing the next generation of practitioners who can enable families to achieve economic security and development. Afterlives of Data follows the curious and multiple lives that our data live once they escape our control. Mary F. E. Ebeling's ethnographic investigation shows how information about our health and the debt that we carry becomes biopolitical assets owned by healthcare providers, insurers, commercial data brokers, credit reporting companies, and platforms. By delving into the oceans of data built from everyday medical and debt traumas, Ebeling reveals how data about our lives come to affect our bodies and our life chances and to wholly define us. Investigations into secretive data collection and breaches of privacy by the likes of Cambridge Analytica have piqued concerns among many Americans about exactly what is being done with their data. From credit bureaus and consumer data brokers like Equifax and Experian to the secretive military contractor Palantir, this massive industry has little regulatory oversight for health data and works to actively obscure how it profits from our data. In this book, Ebeling traces the health data—medical information extracted from patients' bodies—that are digitized and repackaged into new data commodities that have afterlives in database lakes and oceans, algorithms, and statistical models used to score patients on their creditworthiness and riskiness. Critical and disturbing, Afterlives of Data examines how Americans' data about their health and their debt are used in the service of marketing and capitalist surveillance. Handbook on ICT in Developing Countries: Next Generation ICT Technologies is the second volume of the Handbook of ICT in Developing Countries. The first volume was on the potential implementation and service delivery of the forth-coming 5G networks. Here the focus is on the new technologies and services enabled by 5G networks or broadband Internet networks including artificial Intelligence (AI), machine learning, augmented reality, Internet of Things (IoT), autonomous driving, blockchain solutions, cloud solutions etc. Some of these are already globally experiencing growth in the existing networks and all of them are expected to grow substantially in the future. Examples: currently, 5% of global organizations have fully adopted AI, but the penetration is expected to increase rapidly before 2025. IoT with 20.35 billion devices connected in 2017 is estimated to show 75.44 billion devices connected in 2025. The expected growth is based on delivering of new value to businesses and citizens. It is, however, not obvious that this growth will also occur in developing countries. Currently, the digital divide between developing countries and developed countries is widening. This is mostly due to the lack of infrastructure and low level of awareness by the businesses and citizens of the value made possible by the new technologies for developing countries. The book discusses the potentials of the new technologies for developing countries and the need for market interventions that will facilitate the demand and supply side of the market. It is designed for a broad audience including practitioners, researchers, academics, policy makers and industry players and influencers. The language and approach to the handbook is a combination of the academic writing style and professional reviews. User's guide. NATIONAL BESTSELLER "A fresh way to think about your money." David Chilton, author of *The Wealthy Barber* Stop budgeting. Start living. Managing your money can be frustrating and confusing. Life is expensive. Whether you make \$30,000 or \$130,000 a year, it can feel like you're constantly broke. Can you afford that new car, that vacation, that night out? You think so, but it feels impossible to know. And rigid budgets that force you to spend your money in unrealistic ways (like \$9.50 per week for pants) don't make things any clearer. But what if there was a new way to manage your money? One that left you certain you had your bases covered—both for your monthly bills and your future retirement—and then let you enjoy your money by spending it. (Yes, really.) Enter Shannon Lee Simmons, a fresh voice in the world of personal finance, one who understands the new and very real pressures to survive modern life and keep up in the age of social media. Shannon doesn't lecture, judge or patronize. The founder of the wildly popular New School of Finance, Shannon recognized that most of her thousands of financial planning clients felt broke, no matter what their income. And feeling broke can be as bad as actually being broke, because it leads to overspending and misery. So she came up with a new plan: Worry-Free Money. Worry-Free Money takes a fresh approach to finances, looking at the root cause of the pressure to spend and showing why traditional budgets don't work. It is a deeply practical book that will help you break the cycle of guilt, understand why you overspend, banish unhappy spending from your life, learn to recognize your f\*ck it moments and find hope—and fun—in getting your money under control.
