*A New High-Speed Tow Facility at the David W. Taylor Naval Ship Research and Development Center* Mar 16 2022 A new High-Speed Tow Facility at the David W. Taylor Naval Ship Research and Development Center is described. The information presented includes the development, construction, and use of the facility. (Author).

Connection Management and File Transfer Protocols for the DTNSRDC (David Taylor Naval Ship Research and Development Center) Hyperchannel Network Jul 28 2020 This report describes two sets of protocols implemented on DTNSRDC's Hyperchannel based local area network. The first protocol set facilitates local area network connections among arbitrary processes running on computers attached to DTNSRDC's Hyperchannel network. The second protocol set provides a mechanism for allowing local area network hosts (computers connected via the Hyperchannel) to store, retrieve, and delete files on other network hosts. The base protocol implemented on the Hyperchannel is a general purpose network connection management protocol. The network connection protocol (NCP) is intended to allow any network host to support up to 255 simultaneous logical connections between itself and remote hosts. This protocol makes no specific provisions to ensure data integrity or flow control. Instead, the Hyperchannel hardware is relied upon to provide these services. In most cases this will be sufficient. Originator-supplied keywords include: Local area networking, Transport protocol, File transfer.

**The Next America** Sep 22 2022 The America of the near future will look nothing like the America of the recent past. America is in the throes of a demographic overhaul. Huge generation gaps have opened up in our political and social values, our economic well-being, our family structure, our racial and ethnic identity, our gender norms, our religious affiliation, and our technology use. Today's Millennials -- well-educated, tech savvy, underemployed twenty-somethings -- are at risk of becoming the first generation in American history to have a lower standard of living than their parents. Meantime, more than 10,000 Baby Boomers are retiring every single day, most of them not as well prepared financially as they'd hoped. This graying of our population has helped polarize our politics, put stresses on our social safety net, and presented our elected leaders with a daunting challenge: How to keep faith with the old without bankrupting the young and starving the future. Every aspect of our demography is being fundamentally transformed. By mid-century, the population of the United States will be majority non-white and our median age will edge above 40 -- both unprecedented milestones. But other rapidly-aging economic powers like China, Germany, and Japan will have populations that are much older. With our heavy immigration flows, the US is poised to remain relatively young. If we can get our spending priorities and generational equities in order, we can keep our economy second to none. But doing so means we have to rebalance the social compact that binds young and old. In tomorrow's world, yesterday's math will not add up. Drawing on Pew Research Center's extensive archive of public opinion surveys and demographic data, The Next America is a rich portrait of where we are as a nation and where we're headed -- toward a future marked by the most striking social, racial, and economic shifts the country has seen in a century.

**The Proceedings** Apr 17 2022 This book reports on research on and experience with needle exchange and bleach distribution programs and their effects on rates of drug use, the behavior of injection drug users, and the spread of HIV and other infectious diseases among injection drug users. It discusses U.S. needle exchange data, international evaluations of needle exchange programs, legal issues and drug paraphernalia laws, evaluation methods, and bleach distribution programs.

Maxwell Taylor's Cold War Feb 03 2021 General Maxwell Taylor served at the nerve centers of US military policy and Cold War strategy and experienced firsthand the wars in Korea and Vietnam, as well as crises in Berlin and Cuba. Along the way he became an adversary of President Dwight D. Eisenhower's nuclear deterrence strategy and a champion of President John F. Kennedy's shift toward Flexible Response. Taylor also remained a public critic of defense policy and civil-military relations into the 1980s and was one of the most influential American soldiers, strategists, and diplomats. However, many historians describe him as a politicized, dishonest manipulator whose actions deeply affected the national security establishment and had lasting effects on civil-military relations in the United States. In Maxwell Taylor's Cold War: From Berlin to

Vietnam, author Ingo Trauschweizer traces the career of General Taylor, a Kennedy White House insider and architect of American strategy in Vietnam. Working with newly accessible and rarely used primary sources, including the Taylor Papers and government records from the Cold War crisis, Trauschweizer describes and analyzes this polarizing figure in American history. The major themes of Taylor's career, how to prepare the armed forces for global threats and localized conflicts and how to devise sound strategy and policy for a full spectrum of threats, remain timely and the concerns he raised about the nature of the national security apparatus have not been resolved.

*Where the Fleet Begins* Jan 26 2023 Traces the modern research and development center from its dual origin when David Taylor and George Melville brought science and technology to the emerging steam-driven steel fleet, through a full century of modernization and several reorganizations. Details the constant work to transform vision into reality, and to keep innovation flowing from cutting-edge science and technology into the Navy's ships and submarines.

**RDT & E Center Management Briefs. Volume 1. Space and Naval Warfare Systems Command, R & D Centers & University Laboratories, DTRC, NADC, NCSC, NOSC, NPRDC, NSWC, NUSC, NWC, APL/JHU, APL/UW, ARL/PSU, ARL/UT.** Feb 15 2022 These RDT & E center management briefs contain information relative to the missions, facilities, programs, major accomplishments, organization, personnel, funds, and functions/responsibilities of each Space and Naval Warfare Systems Command R & D Center and University Laboratory. The briefs are intended to provide an accessible source of information pertinent to overall operations of the COMSPAWARSYSCOM R & D Centers and University Laboratories. The centers are located at: David Taylor Research Center, Naval Air Development Center, Naval Coastal Systems Center, Naval Ocean Systems Center, Navy Personnel Research and Development Center, Naval Surface Warfare Center, Naval Underwater Systems Center, Naval Weapons Center, and Applied Physics Laboratories at Johns Hopkins University, University of Washington, Pennsylvania State University, and the University of Texas. Keywords: Naval research, Research management, Naval warfare, Space warfare. (EDC).

*Supplying the Nuclear Arsenal* Dec 01 2020 Originally published in 1996. Although the history of commercial-power nuclear reactors is well known, the story of the government reactors that produce weapons-grade plutonium and tritium has been shrouded in secrecy. *Supplying the Nuclear Arsenal* looks at the origin and development of these production reactors, Rodney Carlisle and Joan Zenzen describe a fifty-year government effort no less complex, expensive, and technologically demanding than the Polaris or Apollo programs—yet one about which most Americans know virtually nothing. Carlisle and Zenzen describe the evolution of the early reactors, the atomic weapons establishment that surrounded them, and the sometimes bitter struggles between business and political constituencies for their share of "nuclear pork." They show how, since the 1980s, aging production reactors have increased the risk of radioactive contamination of the atmosphere and water table. And they describe how the Department of Energy mounted a massive effort to find the right design for a new generation of reactors, only to abandon that effort with the end of the Cold War. Today, all American production reactors remain closed. Due to short half-life, the nation's supply of tritium, crucial to modern weapons, is rapidly dwindling. As countries like Iraq and North Korea threaten to join the nuclear club, the authors contend, the United States needs to revitalize tritium production capacity in order to maintain a viable nuclear deterrent. Meanwhile, as slowly decaying artifacts of the Cold War, the closed production reactors at Hanford, Washington, and Savannah River, South Carolina, loom ominously over the landscape.

*How to Get it* Oct 19 2019 Comprehensive guide to identifying and acquiring government-sponsored documents, maps, patents, specifications, and other resources. Describes each item and gives its source, acronym, series designation or short title, cost, where it is indexed, and telephone numbers to call for more information. It emphasizes research development, testing, and evaluation programs.

*Overground Railroad* Dec 21 2019 This historical exploration of the Green Book offers "a fascinating [and] sweeping story of black travel within Jim Crow America across four decades" (The New York Times Book Review). Published from 1936 to 1966, the Green Book was hailed as the "black travel guide to America." At that time, it was very dangerous and difficult for African-Americans to travel because they couldn't eat, sleep, or buy gas at most white-owned businesses. The Green Book listed hotels, restaurants, gas stations, and other businesses that were safe for black travelers. It was a resourceful and innovative solution to a horrific problem. It took courage to be listed in the Green Book, and *Overground Railroad* celebrates the stories of those who put their names in the book and stood up against segregation. Author Candacy A. Taylor shows the history of the Green Book, how we arrived at our present historical moment, and how far we still have to go when it comes to race relations in America. A New York Times Notable Book of 2020

*Intelligent Processing for Spray Metal Manufacturing* Apr 24 2020 A program to implement real time sensing and control of spray formed preform conditions is underway at the David Taylor Research Center. The objective of the program is to develop sensor and control technology to monitor the critical process conditions and to modify parameters during the spray forming process to produce components with repeatable microstructural quality. This task has been divided into two phases, the first of which entails development of sensors and controls to monitor and correct simulated process conditions. In the second phase, the selected sensors and controls will be combined with actuators for integration with the DTRC equipment to allow for the production of nonsymmetric preforms.
