Handbook for Liturgical Studies, Volume V Sep 29 2020 The final volume in the Handbook for Liturgical Studies series, Volume V: Liturgical Time and Space contains the concluding material for an integral study of the liturgy. It opens with a preliminary notion of time and space, before discussing in detail three types of liturgical celebrations on which time and space have a direct and particular bearing. The first of these is the Liturgy of the Hours. This topic is developed in the light of the early Christian tradition until the fourth century and its subsequent forms in both East and West. The second is the Liturgical Year, traditionally called the *anni circulas*. The development of the Liturgical Year during the first four centuries is reviewed. This is followed by a detailed study of the Byzantine, Roman, and non-Roman Western tradition. It concludes with the theology and spirituality of the Liturgical Year wherein the mystery of Christ as a saving event is made present in time, so that the faithful may lay hold of it through the Word and the sacraments. The theology of liturgical space is drawn from the mutual interaction between the assembled community, which gives meaning to the place of assembly, and the place itself, which upholds and signifies community. Articles and their contributors in Part I: Liturgy of the Hours are "Liturgy of the Hours in the First Four Centuries," by Ruben Leikam, OSB; "Liturgy of the Hours in the East," by Robert Taft, SJ; "Liturgy of the Hours in the Roman Rite," by Ruben Leikam, OSB; "Liturgy of the Hours in the Non-Roman West," by Ruben Leikam, OSB; and "Theology of the Liturgy of the Hours," by Robert Taft, SJ. Articles and their contributors in Part II: The Liturgical Year are "The Liturgical Year in the East," by Matias Auge, CMF; "The Liturgical Year in the East," by Elena Velkova Velkovska; "The Liturgical Year in the Roman Rite," by Matias Auge, CMF; "The Liturgical Year in the Non-Roman West," by Gabriel Ramis; "The Cult of Mary in East and West," by Ignacio Calabuig, OSM; "The Cult of Saints in East and West," by Philippe Rouillard, OSB; and "Theology of the Liturgical Year," by Matias Auge, CMF. Articles and their contributors in Part III: Liturgical Space are "Dedication of the Church in East and West," by Ignacio Calabuig, OSM; "Liturgical Architecture in East and West," by Crispino Valenziano; and "Theology of Liturgical Space," by Cettina Militello. Anscar J. Chupungco, OSB, is the director of the Paul VI Institute of Liturgy in the Philippines and professor of liturgical inculturation at the Pontifical Liturgical Institute in Rome. Among his publications are *Liturgies of the Future: The Process and Methods of*

Inculturation and Liturgical Inculturation: Sacraments, Religiosity, and Catechesis, published by The Liturgical Press. "

Applied Optics and Optical Engineering Jul 20 2022 Applied Optics and Optical Engineering, Volume IX covers the theories and applications of optics and optical engineering. The book discusses the basic algorithms for optical engineering; diffraction gratings, ruled and holographic; and recording and reading of information on optical disks. The text also describes the perfect point spread function; the multiple aperture telescope diffraction images; and the displays and simulators. Ophthalmic optics, as well as the canonical and real-space coordinates used in the theory of image formation are also encompassed. Optical engineers and students taking related courses will find the book invaluable.

The Papers of Ulysses S. Grant [v.9] Jan 26 2023 When Vicksburg fell, Washington promoted Grant to major general in the U.S. Army, which meant that Grant, already a major general of volunteers, would retain his rank after the war. Only three other officers on active duty held this rank, none of them commanding in the field. At Vicksburg Grant supervised the parole of 30,000 prisoners. His victory there had opened trade on the Mississippi; for a short time his duty also consisted of making sure the Union, not the Confederacy, benefited from this newly opened route. At the end of August Grant went to New Orleans to confer about an attack on Mobile, Alabama. After being sidelined following a fall from his horse—which revived rumors of his drinking—Grant entered Chattanooga to open a supply line to besieged Chickamauga, Georgia. He then coordinated an assault that delivered Chickamauga into Union hands, and before the end of the year he had driven the Confederates from Tennessee. Congress voted him a gold medal, discussed a bill to revive the rank of lieutenant general, and both parties considered him as a potential candidate for Congress. Grant carefully composed his letters to discourage his political supporters. As usual, Grant meant what he said: he was a soldier who wanted the opportunity to fulfill his responsibility.

The Thermal and Hydrodynamic Behavior of Thick, Rough-wall, Turbulent Boundary Layers Dec 21 2019 Thick, fully rough, and transitionally rough turbulent boundary layers were studied in order to investigate the differences between fully rough and transitionally rough behavior and to observe how downstream development affects these flows as the boundary layers become very thick. Measurements included Stanton numbers, skin friction coefficients, mean temperature and velocity profiles, Reynolds stress tensor component profiles, and spectra of the longitudinal velocity fluctuations. Predictions of wall heat transfer, wall shear, and mean profiles were made using a mixing-length and turbulent Prandtl number closure scheme which accounted for the effects of wall roughness in the boundary layer equations. The turbulent layers were artificially thickened using an array of solid obstacles which produced a two-

dimensional equilibrium flow field with properties representative of natural boundary layers, at least up to the level of the turbulent correlations on a smooth wall, and to the level of the spectra of longitudinal velocity fluctuations on a rough wall. A rough-wall boundary layer environment was provided in which all measurements of lower order than the turbulence correlations could be discussed regarding the influence of roughness, and considered to have properties representative of natural behavior. Infrared and Millimeter Waves V9 Apr 24 2020 *Infrared and Millimeter Waves, Volume 9: Millimeter Components and Techniques, Part I* compiles the work of several authors while focusing on certain aspects of infrared and millimeter waves, such as sources of radiation, instrumentation, and millimeter systems. This volume deals with millimeter components and techniques. Chapter 1 covers millimeter wave communications, and then the succeeding chapter discusses a comparative study of millimeter waves and transmission lines. This book then tackles dielectric waveguide electrooptic devices, as well as millimeter-wave propagation and remote sensing of the atmosphere, which are covered in Chapter 4. The fifth chapter presents the technology of large radio telescopes for millimeter and submillimeter. The next chapter explains a gyrotron study program, and the last chapter discusses multimode analysis of quasi-optical gyrotrons and gyroklystrons. This book will be of great use for researchers or professionals whose work involves infrared and millimeter waves.

WIS:dom®-P v9.0 Weather-Informed energy Systems: for design, operations and markets (Planning Version) Nov 24 2022 The WIS:dom® (Weather-Informed energy

Systems: for design, operations and markets) optimization planning model is the state-of-the-art energy model developed by Vibrant Clean Energy, LLC (VCE®). It is the first commercial co-optimization model of energy grids that was built from the ground up to incorporate vast volumes of data; starting with high-resolution weather and demand data. WIS:dom®-P simultaneously co-optimizes the capacity expansion requirements (generation, transmission, and storage) and the dispatch requirements (production cost, power flow, reserves, ramping, and reliability) for the entire electric (energy) grid of interest. Not only does WIS:dom® co-optimize these critically linked properties, it was developed from the ground up to work with “big data”. The model can determine the cost/benefit ratios for new HVDC transmission lines, compared with other technologies. It can also determine the risk and rewards from retiring existing generators for the topology of the transmission infrastructure; simultaneously to determining how more variable generation is deployed to replace them. WIS:dom® utilizes high-resolution (spatially and temporally) weather data to determine resource properties over vast spatial-temporal horizons. Thus, WIS:dom® can be used on scales as small as campuses, cities, counties or states/provinces; but uniquely can also be used for sovereign entities and continents. Moreover, these scales can be nested, allowing high-fidelity local modeling accompanied with lower-fidelity larger areas to create feedbacks within the model that simulate outside influences on local markets. The model relies on publically available data where possible, and contains default values for generators, transmission, storage, production cost and resource siting. However, WIS:dom® was designed from the beginning to allow “plug-and-play” capability, whereby it can take advantage of customized datasets required for detailed modeling of specific questions, markets or balancing areas. For example, higher-resolution weather data over a utility or ISO; or proprietary heat rates for generators within a utility. The modeling framework is unique and consistent across various scales facilitating more transparent analysis between results derived. With WIS:dom® new opportunities are identified due to the co-optimization detecting patterns ignored by other modeling endeavors. The WIS:dom® optimization model allows datasets to be added for specific local interests. For example, WIS:dom® can be deployed for any country or continent around the globe. The model requires the local datasets (or uses the default global one) and then can study various questions of interest – such as greenhouse gas emission, HVDC transmission links, variable generation and reliability, water consumption, air pollution, electric vehicle penetrations, electric heating, jobs and tax revenues, and more.

Cosmopolitanism and Nationhood in the Age of Jefferson explores the origins of modern conceptions of world citizenship and the nation in Jeffersonian America. In today's discussions of a transnational world, cosmopolitanism tends to be understood as a potential antidote to problematic aspects of nationhood - indeed, cosmopolitanism is often treated as a direct antonym of nationalism. From the perspective of the eighteenth century, however, such an understanding would hardly be self-evident: for Thomas Jefferson and many of his peers in the late Enlightenment, it was possible to conceive of themselves as broad-minded cosmopolitans and as ardent advocates of national interests, without having to emphasize a potential of conflict. Jeffersonian cosmopolitanism, as analyzed in the contributions to this volume, could thus become a powerful secular source of nineteenth- and twentieth-century American exceptionalism.

Biochemical Actions of Hormones Aug 29 2020 *Biochemical Actions of Hormones, Volume IX* is an 11-chapter text that provides the developments in the theoretical and experimental understanding of hormonal actions and regulation. After presenting an overview of research on peptide and steroid hormones, this volume goes on exploring the lipotropins and their active degradation products, as well as the adenylate cyclase enzyme regulation by adrenergic receptors. These topics are followed by discussions on the potassium ion conductance in the pancreatic beta cell; the concept of the insulin sensitive chemoreceptor of the central nervous system; the estrogen-induced growth factors and their role in tumor cell growth; and the nuclear acceptors for the avian progesterone receptor. Other chapters consider the structural aspects of steroid hormones and their receptors, with an emphasis on the importance of pyridoxal phosphate research studies on a better understanding of the steroid receptors function. This book also looks into an affinity label for glucocorticoid receptors and the development of a polyclonal antibody for this receptor. The concluding chapter emphasizes the regulation of the steroid sulfotransferases. This volume will be of great value to biologists, biochemists, and researchers who are interested in the biochemical aspects of hormones.

Physical Acoustics V9 Jan 22 2020 Physical Acoustics: Principles and Methods, Volume IX includes four chapters that are device-oriented and devoted to understanding electron drag stresses on dislocations and difference in flow stress between the normal and superconducting states of Type I and Type II superconductors. Chapter 1 explains that when a dislocation moves through a crystal, it gives up energy to the medium either through a nonlinear motion over a dynamic Peierls barrier or through conversion of energy by scattering of electrons or phonons, which takes place with an energy loss proportional to the velocity. The next chapter discusses the propagation of ultrasonic surface waves in thin layers. The thin layer confines a surface wave laterally, providing a desired dispersion characteristic, acting as part of a transducer for generating surface waves, or providing an interaction region for other phenomena. Chapter 3 deals with a generation of solid state control elements that utilize the inverse piezoelectric effect. The last chapter provides approximate equations for coupled resonators and methods for accurately controlling the band frequency and bandwidth. This book is a useful reference for students and physicists working on physical acoustics.

LIGHTWAVE V9 TEXTURING Mar 24 2020 LightWave v9 Texturing takes you behind the fine art of surfacing your 3D objects using LightWave 3D. Because many artists find texturing and prepping objects for texturing intimidating or confusing, this book breaks down the process and makes it easier to understand by guiding you through LightWave's powerful surfacing toolset and a number of helpful tutorials. LightWave v9 Texturing also demonstrates how easy it is to create surfaces using LightWave's new, powerful node-based shading system. With this book go beyond texturing theory to find out what makes a great realistic texture; learn how to build textures using both LightWave's classic layer system and the new Node Editor; discover how to unwrap and edit UV maps; find out how to create a variety of surfaces through a series of tutorials; enhance your surfaces with gradients, image maps, and procedural textures.
