Spiritual Intelligence Jan 26 2021 Decades ago, the noted psychiatrist R. D. Laing acknowledged that Each child is a new being, a potential prophet, a new spiritual prince/princess, a new spark of light precipitating into the outer darkness. From Mandate to Blueprint May 10 2022 In From Mandate to Blueprint, Thomas Fingar offers a guide for new federal government appointees faced with the complex task of rebuilding institutions and transitioning to a new administration. Synthesizing his own experience implementing the most comprehensive reforms to the national security establishment since 1947, Fingar provides crucial guidance to newly appointed officials. When Fingar was appointed the first Deputy Director of National Intelligence for Analysis in 2005, he discovered the challenges of establishing a new federal agency and implementing sweeping reforms of intelligence procedure and performance. The mandate required prompt action but provided no guidance on how to achieve required and desirable changes. Fingar describes how he defined and prioritized the tasks involved in building and staffing a new organization, integrating and improving the work of sixteen agencies, and contending with pressure from powerful players. For appointees without the luxury of taking command of fully staffed and well-functioning federal agencies, From Mandate to Blueprint is an informed and practical guide for the challenges ahead.

Softwar Dec 25 2020 In a business where great risks, huge fortunes, and even bigger egos are common, Larry Ellison stands out as one of the most outspoken, driven, and daring leaders of the software industry. The company he cofounded and runs, Oracle, is the number one business software company: perhaps even more than Microsoft's, Oracle's products are essential to today's networked world. But Oracle is as controversial as it is influential, as feared as it is revered, thanks in large part to Larry Ellison. Though Oracle is one of the world's most valuable and profitable companies, Ellison is not afraid to suddenly change course and reinvent Oracle in the pursuit of new and ever more ambitious goals. Softwar examines the results of these shifts in strategy and the forces that drive Ellison relentlessly on. In Softwar, journalist Matthew Symonds gives readers an exclusive and intimate insight into both Oracle and the man who made it and runs it. As well as relating the story of Oracle's often bumpy path to industry dominance, Symonds deals with the private side of Ellison's life. From Ellison's troubled upbringing by adoptive parents and his lifelong search for emotional security to the challenges and opportunities that have come with unimaginable wealth, Softwar gets inside the skin of a fascinating and complicated human being. With unlimited insider access granted by Ellison himself, Symonds captures the intensity and, some would say, the recklessness that have made Ellison a legend. The result of more than a hundred hours of interviews and many months spent with Ellison, Softwar is the most complete portrait undertaken of the man and his empire -- a unique and gripping account of both the way the computing industry really works and an extraordinary life. Despite his closeness to Ellison, Matthew Symonds is a candid and at times highly critical observer. And in perhaps the book's most unusual feature, Ellison responds to Symonds's portrayal in the form of a running footnoted commentary. The result is one of the most fascinating business stories of all time.

Meta-Learning in Computational Intelligence May 18 2020 Computational Intelligence (CI) community has developed hundreds of algorithms for intelligent data analysis, but still many hard problems in computer vision, signal processing or text and multimedia understanding, problems that require deep learning techniques, are open. Modern data mining packages contain numerous modules for data acquisition, pre-processing, feature selection and construction, instance selection, classification,

association and approximation methods, optimization techniques, pattern discovery, clusterization, visualization and post-processing. A large data mining package allows for billions of ways in which these modules can be combined. No human expert can claim to explore and understand all possibilities in the knowledge discovery process. This is where algorithms that learn how to learn come to rescue. Operating in the space of all available data transformations and optimization techniques these algorithms use meta-knowledge about learning processes automatically extracted from experience of solving diverse problems. Inferences about transformations useful in different contexts help to construct learning algorithms that can uncover various aspects of knowledge hidden in the data. Meta-learning shifts the focus of the whole CI field from individual learning algorithms to the higher level of learning how to learn. This book defines and reveals new theoretical and practical trends in meta-learning, inspiring the readers to further research in this exciting field.

Rebooting AI Jan 14 2020 Two leaders in the field offer a compelling analysis of the current state of the art and reveal the steps we must take to achieve a truly robust artificial intelligence. Despite the hype surrounding AI, creating an intelligence that rivals or exceeds human levels is far more complicated than we have been led to believe. Professors Gary Marcus and Ernest Davis have spent their careers at the forefront of AI research and have witnessed some of the greatest milestones in the field, but they argue that a computer beating a human in Jeopardy! does not signal that we are on the doorstep of fully autonomous cars or superintelligent machines. The achievements in the field thus far have occurred in closed systems with fixed sets of rules, and these approaches are too narrow to achieve genuine intelligence. The real world, in contrast, is wildly complex and open-ended. How can we bridge this gap? What will the consequences be when we do? Taking inspiration from the human mind, Marcus and Davis explain what we need to advance AI to the next level, and suggest that if we are wise along the way, we won't need to worry about a future of machine overlords. If we focus on endowing machines with common sense and deep understanding, rather than simply focusing on statistical analysis and gathering ever larger collections of data, we will be able to create an AI we can trust—in our homes, our cars, and our doctors' offices. Rebooting AI provides a lucid, clear-eyed assessment of the current science and offers an inspiring vision of how a new generation of AI can make our lives better.

Leading Intelligence Analysis Feb 07 2022 "Bruce Pease has written a much needed book on a long ignored topic: how does one lead analysts? Most analysis is at some level a group activity, whether in government or the private sector. Much has been written about good versus bad analysis and how to train analysts, but Pease, himself a veteran senior CIA analyst and manager, focuses on what the leaders of these analysts need to know and should be thinking about. Leadership matters in analysis as in all other endeavors, and Pease offers invaluable guidance on how to lead effectively. This book is a must for anyone in a leadership role in an analytic enterprise." —Mark M. When does pressure bring out their best insights? When does pressure sap their intellectual energy? and What kind of team builds new knowledge rather than engaging in group-think? This book draws on the author's perspective from decades of leading intelligence analysts on critical issues, including war in the Middle East, terrorism after 9/11, and nuclear threats. Key Features Practical advice helps leaders of analytic units nurture insight with the understanding that it can be enabled but not manufactured. Discussion of a range of different types of analysis serves leaders conducting research in areas including data analysis, security analysis, geopolitical analysis, threat warning, counterterrorism, and business climate analysis. Practical advice on judging IT tools guides leaders to the correct data science approach for various situations.

Learning from the Secret Past Dec 05 2021 Identifying "lessons learned" is not new—the military has been doing it for decades. However, members of the worldwide intelligence community have been slow to extract wider lessons gathered from the past and apply them to contemporary challenges. Learning from the Secret Past is a collection of ten carefully selected cases from post-World War II British intelligence history. Some of the cases include the Malayan Emergency, the Cuban Missile Crisis, Northern Ireland, and the lead up to the Iraq War. Each case, accompanied by authentic documents, illuminates important lessons that today's intelligence officers and policymakers—in Britain and elsewhere—should heed. Written by former and current intelligence officers, high-ranking government officials, and scholars, the case studies in this book detail intelligence successes and failures, discuss effective structuring of the intelligence community, examine the effective use of intelligence in counterinsurgency, explore the ethical dilemmas and practical gains of interrogation, and highlight the value of human intelligence and the dangers of the politicization of intelligence. The lessons learned from this book stress the value of past experience and point the way toward running effective intelligence agencies in a democratic society. Scholars and professionals worldwide who specialize in intelligence, defense and security studies, and international relations will find this book to be extremely valuable.

What We Won Jun 18 2020 In February 1989, the CIA’s chief in Islamabad famously cabled headquarters a simple message: “We Won.” It was an understated coda to the most successful covert intelligence operation in American history. In *What We Won*, CIA and National Security Council veteran Bruce Riedel tells the story of America’s secret war in Afghanistan and the defeat of the Soviet 40th Red Army in the war that proved to be the final battle of the cold war. He seeks to answer one simple question—why did this intelligence operation succeed so brilliantly? Riedel has the vantage point few others can offer: He was ensconced in the CIA’s Operations Center when the Soviet Union invaded Afghanistan on Christmas Eve 1979. The invasion took the intelligence community by surprise. But the response, initiated by Jimmy Carter and accelerated by Ronald Reagan, was a masterful intelligence enterprise. Many books have been written about intelligence failures—from Pearl Harbor to 9/11. Much less has been written about how and why intelligence operations succeed. The answer is complex. It involves both the weaknesses and mistakes of America’s enemies, as well as good judgment and strengths of the United States. Riedel introduces and explores the complex personalities pitted in the war—the Afghan communists, the Russians, the Afghan mujahedin, the Saudis, and the Pakistanis. And then there are the Americans—in this war, no Americans fought on the battlefield. The CIA did not send officers into Afghanistan to fight or even to train. In 1989, victory for the American side of the cold war seemed complete. Now we can see that a new era was also beginning in the Afghan war in the 1980s, the era of the global jihad. This book examines the lessons we can learn from this intelligence operation for the future and makes some observations on what came next in Afghanistan—and what is likely yet to come.

Why Intelligence Fails Aug 13 2022 The U.S. government spends enormous resources each year on the gathering and analysis of intelligence, yet the history of American foreign policy is littered with missteps and misunderstandings that have resulted from intelligence failures. In *Why Intelligence Fails*, Robert Jervis examines the politics and psychology of two of the more spectacular intelligence failures in recent memory: the mistaken belief that the regime of the Shah in Iran was secure and stable in 1978, and the claim that Iraq had active WMD programs in 2002. The Iran case is based on a recently declassified report Jervis was commissioned to undertake by CIA thirty years ago and includes memoranda written by CIA officials in response to Jervis’s findings. The Iraq case, also grounded in a review of the intelligence community’s performance, is based on close readings of both classified and declassified documents, though Jervis’s conclusions are entirely supported by evidence that has been declassified. In both cases, Jervis finds not only that intelligence was badly flawed but also that later explanations—analysts were bowing to political pressure and telling the White House what it wanted to hear or were willfully blind—were also incorrect. Proponents of these explanations claimed that initial errors were compounded by groupthink, lack of coordination within the government, and failure to share information. Policy prescriptions, including the recent establishment of a Director of National Intelligence, were supposed to remedy the situation. In Jervis’s estimation, neither the explanations nor the prescriptions are adequate. The inferences that intelligence drew were actually quite plausible given the information available. Errors arose, he concludes, from insufficient attention to the ways in which information should be gathered and interpreted, a lack of self-awareness about the factors that led to the judgments, and an organizational culture that failed to probe for weaknesses and explore alternatives. Evaluating the inherent tensions between the methods and aims of intelligence personnel and policymakers from a unique insider’s perspective, Jervis forcefully criticizes recent proposals for improving the performance of the intelligence community and discusses ways in which future analysis can be improved.

The Lessons of Afghanistan Jan 06 2022 Asymmetric wars tend to be highly adaptive, and this war is both regional and global in scope. It is also a struggle fought in a context where it may come to interact with other conflicts such as the ongoing Israeli-Palestinian struggle and a possible U.S. effort to drive Saddam Hussein from power. So, while it is easier to draw lessons than to validate them, this study begins that process."--BOOK JACKET.

Mindset Oct 11 2019 From the renowned psychologist who introduced the world to “growth mindset” comes this updated edition of the million-copy bestseller—featuring transformative insights into redefining success, building lifelong resilience, and supercharging self-improvement. “Through clever research studies and engaging writing, Dweck illuminates how our beliefs about our capabilities exert tremendous influence on how we learn and which paths we take in life.”—Bill Gates, *GatesNotes* “It’s not always the people who start out the smartest who end up the smartest.” After decades of research, world-renowned Stanford University psychologist Carol S. Dweck, Ph.D., discovered a simple but groundbreaking idea: the power of mindset. In this brilliant book, she shows how success in school, work, sports, the arts, and almost every area of human endeavor can be dramatically influenced by how we think about our talents and abilities. People with a fixed mindset—those who believe that abilities are fixed—are less likely to flourish than those with a growth mindset—those who believe that abilities can be developed. Mindset reveals how great parents, teachers, managers, and athletes can put this idea to use to foster outstanding accomplishment. In this edition, Dweck offers new insights into her now famous and broadly embraced concept. She introduces a phenomenon she calls false growth mindset and guides people toward adopting a deeper, truer growth mindset. She also expands the mindset concept beyond the individual, applying it to the cultures of groups and organizations. With the right mindset, you can motivate those you lead, teach, and love—to transform their lives and your own.
