This one-volume thematic encyclopedia examines life in contemporary India, with topical sections focusing on geography, history, government and politics, economy, social classes and ethnicity, religion, food,

etiquette, literature and drama, and more. • Includes "Day in the Life" features that portray specific daily activities of various people in the country, from high school students to working class people to professionals, providing readers with insight into daily life in the country • Defines key terms related to the reading in a glossary • Highlights interesting facts and figures, including information on the military, industry and labor, and finances, in an appendix • Provides at-a-glance information about India's festivals and feast days with a chart of national holidays • Illuminates the text with photos and sidebars, helping to illustrate key topics and allow students to dive more deeply into ideas

Counter-Cola charts the history of one of the world's most influential and widely known corporations, The Coca-Cola Company. Over the past 130 years, the corporation has sought to make its products, brands, and business central to daily life in over 200 countries. Amanda Ciafone uses this example of global capitalism to reveal the pursuit of corporate power within the key economic transformations—liberal, developmentalist, neoliberal—of the twentieth and twenty-first centuries. Coca-Cola's success has not gone uncontested. People throughout the world have redeployed the corporation, its commodities, and brand images to challenge the injustices of daily life under capitalism. As Ciafone shows, assertions of national economic interests, critiques of cultural homogenization, fights for workers' rights, movements for environmental justice, and debates over public health have obliged the corporation to justify itself in terms of the common good, demonstrating capitalism's imperative to either assimilate critiques or reveal its limits. The waning of the commodity boom places renewed emphasis on manufacturing as an engine for Canadian growth. However, Canadian manufacturing exports have been relatively stagnant since 2000. While the exchange rate depreciation over the past two years has energized export growth, the response has not been as strong as would have been expected given the size of the depreciation. More fundamental issues appear to be impeding the growth of the Canadian manufacturing sector. This study analyzes the structural factors behind export competitiveness by using unique Canadian data on exports, which are disaggregated both by province and by product. Matching exports to

similarly disaggregated data on R&D, the capital stock and other supply-side variables, we find that these variables significantly affect export growth, beyond the impact of the exchange rate. In particular, investment in R&D, capital infrastructure and vocational training improves innovation and production capacity. These results are robust to a factor-augmented approach that controls for multicollinearity. Based on original research and analysis by a group of health policy experts and economists from across the world, this book analyzes the causes and consequences of the expanding global and local commercialization of health care. It argues for the necessity and possibility of effective policy responses to develop good quality, universally inclusive health systems worldwide. The book aims to contribute to a shift in the international 'common sense' in health policy towards a more humane, inclusive, egalitarian, and ethical framework for policy formulation. This book investigates the roots of rapid economic growth of India in recent decades, by exploring historical processes from the late colonial period. Based upon decades-long archival and field research, this book deals with the period from the late nineteenth century to 2013 and offers an integral viewpoint of the economic history of India. While critiquing the conventional understanding that links recent economic growth only with the development of high-tech, export-oriented service sectors under the liberalized economy, the book suggests deeper and wider roots of development that had a cumulative effect in three stages. Firstly, the agrarian development and rural socio-economic changes from the end of the nineteenth century. Secondly, the state-led import-substitution industrialization since 1950 that established the industrial foundations for future economic growth. Thirdly, the economic reforms since 1991 that helped technology-intensive industries find new markets with improved quality of production. For the first time available in English, this book by the late Professor Haruka Yanagisawa, who was a leading figure in the South Asia studies collective in Japan, is an important contribution to the academic tradition of economic history of India. It will be of interest to researchers in the field of social and economic history, sociology, anthropology and economies of South Asia. This book presents an eclectic mix of interesting new areas in the domain of

economics, management and sustainability. Written by leading experts, it provides valuable food for thought, with essays introducing new lines of research and empirical research papers offering sound research methodology. The book not only provides answers, but also raises numerous interesting questions concerning the areas covered to whet readers' appetites to learn more. Professor Anup Sinha is a respected teacher and is a great mind with wide-ranging academic interests spanning from economics and sustainability to management. As well as in various other places in India and the US, he has taught at the Indian Institute of Management Calcutta and Presidency College (now a University) Calcutta for almost three decades. To commemorate his contributions, this festschrift presents a collection of essays that are broadly subdivided into four sections: Economic Development; Vulnerabilities and Inclusive Growth; Sustainability and Corporate Governance; and Innovation and Management. Despite a decades-long debate, starting with the 'Tuna-Dolphin' disputes of the 1990s, questions on the status of national regulatory measures linked to processes and production methods in WTO law have yet remained unsolved. Likewise, labelling requirements relating to unincorporated aspects of a product's life cycle remain strongly contested. These ongoing disputes at the WTO as well as global social and environmental challenges related to economic activities show how topical and important the search for adequate answers still is. Processes and Production Methods (PPMs) in WTO Law identifies and comprehensively analyses the key legal problems concerning such measures, setting them in the context of the current debate and its economic and regulatory background. Christiane R. Conrad develops a new approach to this debate which draws on the objectives and established economic rationales of the WTO Agreements. Many theories--from the routine to the bizarre--have been offered up to explain the crime decline of the 1990s. Was it record levels of imprisonment? An abatement of the crack cocaine epidemic? More police using better tactics? Or even the effects of legalized abortion? And what can we expect from crime rates in the future? Franklin E. Zimring here takes on the experts, and counters with the first in-depth portrait of the decline and its true significance. The major lesson from

the 1990s is that relatively superficial changes in the character of urban life can be associated with up to 75% drops in the crime rate. Crime can drop even if there is no major change in the population, the economy or the schools. Offering the most reliable data available, Zimring documents the decline as the longest and largest since World War II. It ranges across both violent and non-violent offenses, all regions, and every demographic. All Americans, whether they live in cities or suburbs, whether rich or poor, are safer today. Casting a critical and unerring eye on current explanations, this book demonstrates that both long-standing theories of crime prevention and recently generated theories fall far short of explaining the 1990s drop. A careful study of Canadian crime trends reveals that imprisonment and economic factors may not have played the role in the U.S. crime drop that many have suggested. There was no magic bullet but instead a combination of factors working in concert rather than a single cause that produced the decline. Further--and happily for future progress, it is clear that declines in the crime rate do not require fundamental social or structural changes. Smaller shifts in policy can make large differences. The significant reductions in crime rates, especially in New York, where crime dropped twice the national average, suggests that there is room for other cities to repeat this astounding success. In this definitive look at the great American crime decline, Franklin E. Zimring finds no pat answers but evidence that even lower crime rates might be in store. China is now the world's fourth largest economy and growing very fast. India's economic salience is also on the rise. Together these two countries will profoundly influence the pace and nature of global economic change. Drawing upon the latest research, this volume analyzes the influences on the rapid future development of these two countries and examines how their growth is likely to impinge upon other countries. It considers international trade, industrialization, foreign investment and capital flows, and the implications of their broadening environmental footprints. It also discusses how the two countries have tackled poverty, inequality and governance issues and whether progress in these areas will be a key to rapid and stable growth. Happiness is a private matter and individual pursuit; however, public policy does have an important role and can

contribute much through various enabling means. This volume discusses the determinants of happiness and presents case studies of how public policy can help promote happiness. Rule of law has vanished in America's criminal justice system. Prosecutors decide whom to punish; most accused never face a jury; policing is inconsistent; plea bargaining is rampant; and draconian sentencing fills prisons with mostly minority defendants. A leading criminal law scholar looks to history for the roots of these problems—and solutions. Agricultural policy reform is one of the major challenges facing India today. Such reform is required to reduce poverty through faster agricultural growth and to promote more sustainable use of natural resources while ensuring food security. Subsidy policies that promote the use of fertilizer and of electricity for groundwater irrigation are in particular need of reform. While subsidies for these two inputs played a crucial role in achieving India's Green Revolution, they have been criticized during the past decade for benefitting large-scale farmers more than smallholders, placing a fiscal burden on the state, and having negative environmental effects. By analyzing the evolution of these input subsidy policies and examining the political processes involved in efforts to reform them, this study throws new light on the factors that have so far prevented a move toward more pro-poor and environmentally sustainable agricultural input policies in India. The authors show that electoral politics, institutional factors, and policy paradigms or belief systems all play an important role in blocking reform. They identify several policy reform options as well as political strategies that can overcome past obstacles to reform. Community-based policy solutions, new coalitions for policy reform, fresh approaches to the policy debate, innovative and consensus-oriented forms of deliberation, and effective use of research-based knowledge can all make positive contributions to Indian policy reform. The analyses and proposals presented in this study will be a valuable resource for policymakers and stakeholders concerned with the politics of agricultural development. In today's increasingly interconnected and global society, the protection of basic liberties is an important consideration in public policy and international relations. Profitable social interactions can begin only when a foundation of trust has been

laid between two parties. *Human Rights and Ethics: Concepts, Methodologies, Tools, and Applications* considers some of the most important issues in the ethics of human interaction, whether in business, politics, or science and technology. Covering issues such as cybercrime, bioethics, medical care, and corporate leadership, this four-volume reference work will serve as a crucial resource for leaders, innovators, educators, and other personnel living and working in the modern world. Tax practitioners are unfamiliar with tax theory. Tax economists remain unfamiliar with tax law and tax administration. Most textbooks relate mainly to the US, UK or European experiences. Students in emerging economies remain unfamiliar with their own taxation history. This textbook fills those gaps. It covers the concept of taxes in regards to their rationale, principles, design, and common errors. It addresses distortions in consumer choices and production decisions caused by tax and redressals. The main principles of taxation—efficiency, equity, stabilization, revenue productivity, administrative feasibility, international neutrality—are presented and discussed. The efficiency principle requires the minimisation of distortions in the market caused by tax. Equity in taxation is another principle that is maintained through progressivity in the tax structure. Similarly, other principles have their own ramifications that are also addressed. A country's constitutional specification of tax assignment to different levels of government—central, state, municipal—are elaborated. The UK is more centralised than the US and India. India has amended its constitution to introduce a goods and services tax (GST) covering both central and state governments. Drafting of tax law is crucial for clarity and this aspect is addressed. Furthermore, the author illustrates different types of taxes such as individual income tax, corporate income tax, wealth tax, retail sales/value added/goods and services tax, selective excises, property tax, minimum taxes such as the minimum alternate tax (MAT), cash-flow tax, financial transactions tax, fringe benefits tax, customs duties and export taxes, environment tax and global carbon tax, and user charges. An emerging concern regarding the inadequacy of international taxation of multinational corporations is covered in some detail. Structural aspects of tax administration are given particular attention. This

comprehensive textbook specifically focuses on building a thorough foundation on management studies by sequentially developing the components and basics of management principles and approach, discussing and analysing the key features and methods of modern management practices, and finally exposing the students to some essential topics on environment management, business ethics, corporate governance, and total quality management for sustainable growth and development of business. Students and practicing professionals in this field will be immensely benefited by the coverage and treatment of the book.

Key Features — Based on industry experience with focus on building a strong foundation for management studies, especially in the context of the Indian business environment — Covers critical areas of management like strategic planning, strategic management, supply-chain management, international trade, entrepreneurship and small business management, information management, environment management, business ethics, corporate governance and modern tools for TQM, including cost of poor quality, benchmarking and six-sigma practice — Emphasis on management issues critical to business – organisational culture and leadership, modern HRM, external business environment, ethics of business and corporate governance, and responsibility for natural environment management for sustainable growth — Provides a wider coverage of the interconnected functions, methods, processes, variables, strategies and tools for excellence in business management, including 80-20 rule, Murphy's Law, 1-10-100 rule of cost management, 360 degree appraisal, JIT, TPM, Kaizen etc. Recent decades have witnessed an explosion in supply chain complexity. Very few firms have succeeded in building excellent supply chains and employing supply chain management (SCM) as a competitive advantage. For the ones which have developed enhanced supply chain design and process capabilities, their performance has far exceeded their competitors'. While for the vast majority of firms, SCM still remains a means of reducing costs and improving efficiency, for the excellent ones, SCM has turned into a source for value creation. What factors drive firms towards supply chain excellence? How can real differentiation be created through supply chains? Excellence in Supply Chain Management examines the

characteristics and features of firms that excel in SCM. Using state-of-the-art empirical techniques, contributors address the policy challenges raised by globalization, the internet and other technological advances, innovation, and the rise of security measures in response to the 9/11 terrorist attacks. Chapters are organized around five themes: recent developments and policy challenges, Canadian firms in the information age, research and development and innovation, regulation and industrial performance, and securing trade and investment opportunities. The only substantive research volume on this subject in two decades, *Industrial Organization in Canada* is a welcome resource for policy makers, researchers, and academics concerned with industrial policy issues in contemporary Canada. Contributors include Ajay Agrawal (University of Toronto), Doug Allen (Simon Fraser University), Werner Antweiler (University of British Columbia), John Baldwin (Statistics Canada), Zhiqi Chen (Carleton University), Jean-Étienne de Bettignies (Queen's University), Marc Duhamel (Industry Canada), James Gaisford (University of Calgary), Avi Goldfarb (University of Toronto), Wulong Gu (Statistics Canada), Kathryn Harrison (University of British Columbia), Patrick Joly (Industry Canada), William Kerr (University of Saskatchewan), Kevin Koch (PricewaterhouseCoopers), Donald G. McFetridge (Carleton University), Peter W. B. Phillips (University of Saskatchewan), Mohammed Rafiquzzaman (Industry Canada), Someshwar Rao (Institute for Research on Public Policy), Thomas W. Ross (University of British Columbia), Camille Ryan (University of Saskatchewan), Michel Sabbagh (Industry Canada), Guofu Tan (University of Southern California), Henry Thille (Guelph University), Johannes Van Biesebroeck (K.U. Leuven, Belgium), and Lasheng Yuan (University of Calgary). Crime rates in Latin America are among the highest in the world, creating climates of fear and lawlessness in several countries. Despite this situation, there has been a lack of systematic effort to study crime in the region or the effectiveness of policies designed to tackle it. *The Economics of Crime* is a powerful corrective to this academic blind spot and makes an important contribution to the current debate on causes and solutions by applying lessons learned from recent developments in the economics of crime. *The Economics of*

Crime addresses a variety of topics, including the impact of kidnappings on investment, mandatory arrest laws, education in prisons, and the relationship between poverty and crime. Utilizing research from within and without Latin America, this book illustrates the broad range of approaches that have been efficacious in studying crime in both developing and developed nations. The Economics of Crime is a vital text for researchers, policymakers, and students of both crime and of Latin American economic policy. Corporate governance is part of an economy's system which has today become the most important mechanism for resource allocation. It is affected by capital market, block holders, institutional investors, proxy wars, company law and capital market regulations, and many other macro-economic as well as political factors. Historical evolution of corporate governance naturally has a bearing on current developments. This book is an attempt to weave these factors together coherently. Much of the concerned literature revolves around the agency problem, while in developing countries expropriation of small shareholders is the governance problem. However, shareholder activism is not likely to resolve the issue. Many more measures, from audit committees of the board, rigorous disclosures, exercise of voting rights by institutional investors, strict monitoring by capital market regulator to takeover bids are required to ensure corporate accountability. A new understanding of the culturally rich and historic relationship between Hollywood and Bollywood. With American cinema facing intense technological and financial challenges both at home and abroad, and with Indian media looking to globalize, there have been numerous high-profile institutional connections between Hollywood and Bombay cinema in the past few years. Many accounts have proclaimed India's transformation in a relatively short period from a Hollywood outpost to a frontier of opportunity. Orienting Hollywood moves beyond the conventional popular wisdom that Hollywood and Bombay cinema have only recently become intertwined because of economic priorities, instead uncovering a longer history of exchange. Through archival research, interviews, industry sources, policy documents, and cultural criticism, Nitin Govil not only documents encounters between Hollywood and India but also shows how connections were imagined

over a century of screen exchange. Employing a comparative framework, Govil details the history of influence, traces the nature of interoperability, and textures the contact between Hollywood and Bombay cinema by exploring both the reality and imagination of encounter. The use of taxes to put pressure on polluters has had mixed results internationally, according to this study of economic instruments (EIs) as a means for cleaning up environmental-hazards. The analysis identifies several key considerations in structuring effective ecotaxes, including trade-offs between environmental and other goals, the size of the tax base, distortions in prices, the possibility of phasing in the taxes, incentives for compliance, and the advisability of earmarking of funds for environmental protection. Industries in India covered in the discussion include makers of automobiles, coal, fertilizers, lead acid batteries, paper and pulp, pesticides, plastics, phosphate-based detergents, and rayon. The book begins with a brief overview of Indian and Global Pharmaceutical Market. It discusses unconventional topics related to pharmaceutical marketing. Most of the chapters like Segmentation, Promotional Mix, Consumer Behaviour and Pricing etc, explain the basic concepts with an emphasis on the Pharma perspective. Chapters are updated with recent developments in those fields. Clinical Research has always been under scan, the chapter on clinical research covers the latest amendments and discusses the future trends. Chapter Cosmeceutical gives an overview of Cosmeceutical market scenario and the growth drivers. The book includes a brief note on Ethics. When low-income city dwellers lack access to mainstream banking services, many end up turning to 'fringe banks, ' such as cheque-cashers and pawnshops, for some or all of their financial transactions. This predicament of 'financial exclusion' - faced by those underserved by conventional financial institutions - is comprehensively examined in Jerry Buckland's powerful study, *Hard Choices*. The first account of the nature and causes of financial exclusion in Canada, *Hard Choices* thoroughly integrates economic and social data on consumer choice, bank behaviour, and government policy. Buckland demonstrates why the current two-tier system of banking is becoming increasingly dysfunctional, especially in the context of new credit products that aggravate income inequality and

stifle local economic growth. Featuring a foreword by esteemed economics scholar John P. Caskey, *Hard Choices* presents pragmatic policy improvements on both the public and private levels that can promote and build financial inclusion for all. Donohue and Levitt (2001) present a number of analyses that suggest a causal link between legalized abortion and reductions in crime almost two decades later when the cohorts exposed to legalized abortion reach their peak crime years. Joyce (2003) challenges that finding. In this paper, we demonstrate that Joyce's failure to uncover a negative relationship between abortion and crime is a direct consequence of his decision to focus exclusively on the six-year period 1985-90 without including adequate controls for the crack epidemic. We provide empirical evidence that crack hit the high-abortion early legalizing states harder and earlier. We then demonstrate that using precisely the same treatment and control groups as Joyce, but extending the data analysis to encompass the lifetime criminal experiences (as opposed to an arbitrary six-year window), the evidence strongly supports the hypothesis that legalized abortion reduces crime. We also show that our original results are robust to focusing on only the cohorts born immediately before or after *Roe v. Wade*. The data suggest that ease of access to abortion, rather than simply *de jure* legalization, is a critical determinant of the extent of the crime reduction. Set against a backdrop of financial-sector reforms in India, this analysis explores theories and empirical evidence regarding the behavior of commercial banks and their reactions to centralized monetary policy. A comprehensive account of the credit channels of monetary transmission is presented along with observations of the modified IS-LM model within the independent banking sector. Progressive issues such as future consolidation of the banking sector are also addressed. Ultimately, not all commercial banks react uniformly to monetary policy, as ownership, size, liquidity, and capitalization play key roles in determining individual responses. This book aims to provide a thoroughly updated overview and evaluation of the industrial organization of banking. It examines the interplay among bank behavior, market structure, and regulation from the perspective of a variety of public policy issues, including bank competition and risk, market

discipline, antitrust issues, and capital regulation. New to this edition are discussions of the economic foundations of international banking, macroprudential regulation, and international coordination of banking policies. The book can serve as a learning tool and reference for graduate students, academics, bankers, and policymakers with interests in the industrial organization of the banking sector and the impacts of banking regulations. This book explores India's rise on the global economic stage from the perspective of both international and domestic interests and activities. Sinha argues that the impact of globalization on India since 1990 needs to be understood not just in terms of national policy, but also in terms of changing trade capacities and private sector reform. This book considers the remarkable transformations that have taken place in India since 1980, a period that began with the assassination of the formidable Prime Minister Indira Gandhi. Her death, and that of her son Rajiv seven years later, marked the end of the Nehru-Gandhi era. Although the country remains one of the few democracies in the developing world, many of the policies instigated by these earlier regimes have been swept away to make room for dramatic alterations in the political, economic and social landscape. Sumit Ganguly and Rahul Mukherji, two leading political scientists of South Asia, chart these developments with particular reference to social and political mobilization, the rise of the BJP and its challenge to Nehruvian secularism and the changes to foreign policy that, in combination with its meteoric economic development, have ensured India a significant place on the world stage. IBSS is the essential tool for librarians, university departments, research institutions and any public or private institution whose work requires access to up-to-date and comprehensive knowledge of the social sciences
