This book provides insights into the maze of 'know thyself' through a carefully detailed, comparative study of the Sartrean no-self and the Deleuzean rhizomic self. It is informative, argumentative and rich in literary context, and mainly focuses on the shift in the notion of self from Sartre's elegiac, suicidal and nihilistic tone seen pervasively in modernist fiction to the celebratory, Deleuzean self in postmodernist fiction. To trace this shift, the book presents a comparative analysis of selected novels, showing that authors like Bellow and Atwood have adopted a more positive attitude toward the self similar to the Deleuzean rhizomic self, while authors like Hedayat and Beckett have more reductionist, decadent, nihilistic views on the self, like the Sartrean no-self. Moreover, as argued in the cases of the protagonists in the selected novels, this book further asserts that the Deleuzean rhizomic self might be seen as a possible alternative to help one survive in times of crisis, in contrast to the nihilistic Sartrean no-self. Mapping Modern Beijing investigates five methods of representing Beijing—a warped hometown, a city of snapshots and manners, an aesthetic city, an imperial capital in comparative and cross-cultural

perspective, and a displaced city on the Sinophone and diasporic postmemory—by authors travelling across mainland China, Taiwan, Hong Kong, and overseas Sinophone and non-Chinese communities. Mental health is a growing field, but one still limited by a lack of prior research and challenged by increased demand for new solutions and treatments. During the past few decades, private equity (PE) has attracted considerable attention from investors, practitioners, and academicians. In fact, a substantial literature on PE has emerged. PE offers benefits for institutional and private wealth management clients including diversification and enhancement of risk-adjusted returns. However, several factors such as liquidity concerns, regulatory restrictions, and the lack of transparency limit the attractiveness of some PE options to investors. The latest volume in the Financial Markets and Investments Series, Private Equity: Opportunities and Risks offers a synthesis of the theoretical and empirical literature on PE in both emerging and developed markets. Editors H. Kent

Baker, Greg Filbeck, Halil Kiyamaz and their co-authors examine PE and provide important insights about topics such as major types of PE (venture capital, leveraged buyouts, mezzanine capital, and distressed debt investments), how PE works, performance and measurement, uses and structure, and trends in the market. Readers can gain an in-depth understanding about PE from academics and practitioners from around the world. Private Equity: Opportunities and Risks provides a fresh look at the intriguing yet complex subject of PE. A group of experts takes readers through the core topics and issues of PE, and also examines the latest trends and cutting-edge developments in the field. The coverage extends from discussing basic concepts and their application to increasingly complex and real-world situations. This new and intriguing examination of PE is essential reading for anyone hoping to gain a better understanding of PE, from seasoned professionals to those aspiring to enter the demanding world of finance. Would you ask a honeybee to point at a screen and recognise a facial expression? Or ask an elephant to climb a tree? While humans and non-human species may inhabit the same world, it's likely that our perceptual worlds differ significantly. Emphasising Uexküll's concept of 'umwelt', this volume offers practical advice on how animal cognition can be successfully tested while avoiding anthropomorphic conclusions. The chapters describe the capabilities of a range of animals - from ants, to lizards to chimpanzees - revealing how to successfully investigate animal cognition across a variety of taxa. The book features contributions from leading cognition

researchers, each offering a series of examples and practical tips drawn from their own experience. Together, the authors synthesise information on current field and laboratory methods, providing researchers and graduate students with methodological advice on how to formulate research questions, design experiments and adapt studies to different taxa. This book gives a thorough explanation of standardization, its processes, its life cycle, and its related organization on a national, regional and global level. The book provides readers with an insight in the interaction cycle between standardization organizations, government, industry, and consumers. The readers can gain a clear insight to standardization and innovation process, standards, and innovations life-cycle and the related organizations with all presented material in the field of information and communications technologies. Sustainable building from the ground up - the pros and cons of the latest green and natural materials and technologies From foundation to finish, a wealth of information is available on sustainable construction methods-entire volumes have been published on individual green and natural building techniques. But with so many different ideas to choose from, there is no single resource that allows an owner or builder to quickly and objectively compare the merits of each system for their particular project. Making Better Buildings cuts through the hype and provides the unvarnished facts about the upsides and downsides of the most widely

discussed materials and technologies. Drawing on the real-world experiences of designer/builders, this comparative guide systematically and comprehensively examines each approach in terms of: Cost, sourcing, labor intensity, and ease of construction Energy efficiency, embodied energy, and environmental impacts Availability/accessibility Viable applications and future potential. Each chapter is rounded out by a chart which summarizes the material in a quick and accessible manner. Whether you are an owner preparing to build a green or natural home, or a conventional contractor determined to integrate sustainable alternatives into your existing construction practices, this up-to-the minute resource will help you make the best decisions for your project, while meeting your energy, efficiency, budgetary, and site-specific needs. Introducing Comparative Literature is a comprehensive guide to the field offering clear, concise information alongside useful analysis and examples. Don't work harder—work smarter. The key is to stay organized and focused through solid project management skills, and at the heart of it all lies an efficient workflow. Families share stories with each other and veterans reconnect with their comrades, while teens edit music videos and then upload them to the web: all this and more can happen in the digital media lab (DML), a gathering of equipment with which people create digital content or convert content that is in analog formats. Enabling community members to create digital content was identified by The Edge Initiative, a national coalition of leading library and local government organizations, as a library technology benchmark. Surveying academic and public libraries in a variety of settings and sharing a range of approaches to creating DMLs, this issue of *Library Technology Reports* points the way towards meeting that benchmark, showing Funding sources and amounts for 16 DML projects in a range of libraries Links to sample policies and liability forms Information on hardware, software, and websites for sound production, videography, graphic design, and animation How to design a DML, addressing considerations such as power, noise prevention, ventilation, lighting, furniture, and more Configuration and equipment lists for 8 DMLs, ranging from portable to large libraries In-depth

This

User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews. When the

objectives of public policy programmes have been formulated and decided upon, implementation seems just a matter of following instructions. To understand how people experience justice and security is a challenging task in times of unrest, marked by growing perceptions of insecurity, discrimination and uncertainty. The European project ALTERNATIVE aimed to understand justice and security experiences related to conflicts in intercultural settings, when citizens are given the means to actively contribute to these processes. This book relates how the project was set up as an action research through the concrete description of four action sites: social housing estates in Vienna, Austria; a small community in Hungary with a Roma population; three border towns in Serbia; and three communities in Northern Ireland. These four sites have been compared through an innovative methodology, which leads to a deeper understanding of the impact of participatory and restorative justice oriented processes, and - in a more general way - of what action research may entail in the criminological field. Bringing together researchers and case

studies from around Europe, this book examines the scientific potential of action research as a methodology in criminal justice settings. This book is one of two volumes resulting from the work by a group of researchers in six European countries having cooperated intensively during four years in ALTERNATIVE, an action research project funded under the EU Seventh Framework Programme. WordPress is free software that allows you to build a website with no coding experience required-- but you supply the work that makes the site great.
